This regulation is reprinted as at 10 September 2004. The reprint shows the law as amended by all amendments that commenced on or before that day (Reprints Act 1992 s 5(c)).

The reprint includes a reference to the law by which each amendment was made—see list of legislation and list of annotations in endnotes. Also see list of legislation for any uncommenced amendments.

This page is specific to this reprint. See previous reprints for information about earlier changes made under the Reprints Act 1992. A table of reprints is included in the endnotes.

**Also see endnotes for information about—**

- **when provisions commenced**
- **editorial changes made in earlier reprints.**

## Dates shown on reprints

**Reprints dated at last amendment** All reprints produced on or after 1 July 2002, hard copy and electronic, are dated as at the last date of amendment. Previously reprints were dated as at the date of publication. If a hard copy reprint is dated earlier than an electronic version published before 1 July 2002, it means the legislation was not further amended and the reprint date is the commencement of the last amendment.

If the date of a hard copy reprint is the same as the date shown for an electronic version previously published, it merely means that the electronic version was published before the hard copy version. Also, any revised edition of the previously published electronic version will have the same date as that version.

**Replacement reprint date** If the date of a hard copy reprint is the same as the date shown on another hard copy reprint it means that one is the replacement of the other.

- (6) A reference in schedules 1 to 5 to a regional ecosystem number for a regional ecosystem is a reference to the regional ecosystem number and the description for the ecosystem that are established under the Regional Ecosystem Description Database.<sup>2</sup>

### 3                    **Matters prescribed for property vegetation management plan**

- (1) For the definition *property vegetation management plan* in the schedule to the Act, the following matters are prescribed—

---

2 The Regional Ecosystem Description Database is a database containing regional ecosystem numbers and descriptions that is maintained by the Queensland Herbarium, Environmental Protection Agency, Brisbane. The database is available on the Environmental Protection Agency's website at <[www.epa.qld.gov.au/environment/science/herbarium/regional\\_ecosystems](http://www.epa.qld.gov.au/environment/science/herbarium/regional_ecosystems)>.

- 
- (a) the location and extent of the area proposed to be cleared;
  - (b) whether the vegetation clearing application to which the plan relates is for a purpose mentioned in section 22A(2) of the Act, or is a broadscale application;
  - (c) if the application is for a purpose mentioned in section 22A(2)—the purpose;
  - (d) details of the way the proposed clearing meets the performance requirements of the regional vegetation management code for the area.
- (2) The location and extent of the area proposed to be cleared must be shown by—
    - (a) a map showing—
      - (i) the boundary of the area on an image base; and
      - (ii) 5 or more points visible in the image base that correspond to identifiable fixed features; and
      - (iii) the Map Grid of Australia 1994 coordinates and zone references for each point, acquired by GPS or similar system of satellites that receives and processes information; and
      - (iv) a description of the feature that each point represents; or
    - (b) a description of the boundary of the area by reference to Map Grid of Australia 1994 coordinates and zone references for the area.
  - (3) A property vegetation management plan may include any other information the applicant considers may assist in the assessment of the application.

**4****Application for property map of assessable vegetation—Act, s 20C**

- (1) For the Act, section 20C, the following information is prescribed—

- 
- (a) the vegetation category areas and the boundaries of the areas proposed for the property map of assessable vegetation;
  - (b) information to demonstrate that—
    - (i) the boundaries of the proposed vegetation category areas are accurate; and
    - (ii) the vegetation category areas proposed are consistent with the floristic composition and structure of the regional ecosystems or vegetation in the area.
- (2) The information mentioned in subsection (1)(a) must be supported by a map showing—
- (a) either—
    - (i) 5 or more points that correspond to identifiable fixed features; and
    - (ii) the Map Grid of Australia 1994 coordinates and zone references for each point, acquired by GPS or similar system of satellites that receives and processes information; and
    - (iii) a description of the feature that each point represents; or
  - (b) a description of the boundaries of the areas by reference to Map Grid of Australia 1994 coordinates and zone references for the areas.
