11	Transitional provision	12
Schedule 1	Prescribed entities providing services to enhance public safety—Act, section 26(1)(a)	13
Schedule 2	Prescribed entities providing services to enhance public safety—Act, section 27(1)	15
Schedule 3	Matters to which court may or must have regard in the application of schedule 4	17
Part 1	Objectives of schedule 4 (Ranges of ISVs)	
1	Objectives of sch 4	17

Contents

Part 2	How to use schedule 4	
Division 1	Injury	
2	Injury mentioned in sch 4	17
3	Multiple injuries	18
4	Multiple injuries and maximum dominant ISV inadequate	18
5	Adverse psychological reaction	19
6	Mental disorder	19
7	Aggravation of pre-existing condition	19
Division 2	Other matters	
8	Court must have regard to particular provisions of sch 4	20
9	Court may have regard to other matters	20
10	Whole person impairment	20
11	Medical report stating whole person impairment percentage	21
12	Greater weight to assessments based on AMA 5	21
13	Greater weight to assessments of PIRS rating	22
14	ISV must be a whole number	22
Schedule 4	Ranges of ISVs	23
Part 1	Central nervous system and head injuries	
1	Quadriplegia	23
2	Paraplegia	24
3	Hemiplegia or severe paralysis of more than 1 limb	24
4	Monoplegia	25
5	Extreme brain injury	25
6	Serious brain injury	27
7	Moderate brain injury	29
8	Minor brain injury	31
9	Minor head injury, other than an injury mentioned in part 3	32
Part 2	Mental disorders	
10	Extreme mental disorder	34
11	Serious mental disorder	35
12	Moderate mental disorder	35
13	Minor mental disorder	35
Part 3	Facial injuries	
Division 1	Skeletal injuries of the facial area	
14	Extreme facial injury	36
15	Serious facial injury	37

Page 2 2014 SL No. 129

16	Moderate facial injury	39
17	Minor facial injury	39
18	Injury to teeth or gums	40
Division 2	Scarring to the face	
19	Extreme facial scarring	41
20	Serious facial scarring	42
21	Moderate facial scarring	42
22	Minor facial scarring	43
Part 4	Injuries affecting the senses	
Division 1	General comment	
Division 2	Injuries affecting the eyes	
23	Total sight and hearing impairment	43
24	Total sight impairment	44
25	Complete sight impairment in 1 eye with reduced vision in the other eye	44
26	Complete sight impairment in 1 eye or total loss of 1 eye	44
27	Serious eye injury	45
28	Moderate eye injury	45
29	Minor eye injury	45
Division 3	Injuries affecting the ears	
30	Extreme ear injury	46
31	Serious ear injury	47
32	Moderate ear injury	48
33	Minor ear injury	48
Division 4	Impairment of taste or smell	
34	Total loss of taste or smell, or both	49
35	Partial loss of smell or taste, or both	49
Part 5	Injuries to internal organs	
Division 1	Chest injuries	
36	Extreme chest injury	50
37	Serious chest injury	50
38	Moderate chest injury	51
39	Minor chest injury	53
Division 2	Lung injury other than asthma	
40	Extreme lung injury	55
41	Serious lung injury	56

Contents

42	Moderate lung injury	57
43	Minor lung injury	57
Division 3	Asthma	
44	Extreme asthma	58
45	Severe asthma	59
46	Moderate asthma	59
47	Minor asthma	59
Division 4	Injuries to male reproductive system	
48	Impotence and sterility	60
49	Loss of part or all of penis	61
50	Loss of both testicles	62
51	Loss of 1 testicle	62
Division 5	Injuries to female reproductive system	
52	Infertility	63
53	Any other injury to the female reproductive system	64
54	Failed sterilisation leading to unwanted pregnancy	65
Division 6	Injuries to digestive system	
Subdivision 1	Injury caused by trauma	
55	Extreme injury to the digestive system caused by trauma	66
56	Serious injury to the digestive system caused by trauma	67
57	Moderate injury to the digestive system caused by trauma	68
58	Minor injury to the digestive system caused by trauma	68
Subdivision 2	Injury not caused by trauma	
59	Extreme injury to the digestive system not caused by trauma	69
60	Serious injury to the digestive system not caused by trauma	70
61	Moderate injury to the digestive system not caused by trauma	72
62	Minor injury to the digestive system not caused by trauma	73
Division 7	Kidney or ureter injuries	
63	Extreme injury to kidneys or ureters	74
64	Serious injury to kidneys or ureters	75
65	Moderate injury to kidneys or ureters	75
66	Minor injury to kidneys or ureters	76
Division 8	Liver, gall bladder or biliary tract injuries	
67	Extreme injury to liver, gall bladder or biliary tract	77
68	Serious injury to liver, gall bladder or biliary tract	77
69	Moderate injury to liver, gall bladder or biliary tract	78

96	Serious shoulder injury	100
97	Moderate shoulder injury	101
98	Minor shoulder injury	102
Division 4	Amputation of upper limbs	
99	Loss of both upper limbs, or loss of 1 arm and extreme injury to the other arm	103
100	Loss of 1 upper limb	104
Division 5	Elbow injuries	
101	Extreme elbow injury	106
102	Serious elbow injury	106
103	Moderate elbow injury	107
104	Minor elbow injury	108
Division 6	Wrist injuries	
105	Extreme wrist injury	108
106	Serious wrist injury	109
107	Moderate wrist injury	110
108	Minor wrist injury	110
Division 7	Hand injuries	
109	Total or effective loss of both hands	111
110	Serious injury to both hands	112
111	Total or effective loss of 1 hand	112
112	Amputation of the thumb or part of the thumb	113
113	Amputation of index, middle and ring fingers, or any 2 of them	114
114	Amputation of individual fingers	116
115	Amputation of thumb and all fingers	117
116	Any other injury to 1 or more of the fingers or the thumb	117
117	Extreme hand injury	120
118	Serious hand injury	121
119	Moderate hand injury	122
120	Minor hand injury	122
Division 8	Upper limb injuries, other than injuries mentioned in divisions 3 to 7	
121	Extreme upper limb injury, other than an injury mentioned in divisions 3 to 7	123
122	Serious upper limb injury, other than an injury mentioned in divisions 3 to 7	124

Page 6 2014 SL No. 129

123	Moderate upper limb injury, other than an injury mentioned in divisions 3 to 7
124	Minor upper limb injury, other than an injury mentioned in divisions 3 to 7
Division 9	Pelvis or hip injuries
125	Extreme pelvis or hip injury
126	Serious pelvis or hip injury
127	Moderate pelvis or hip injury
128	Minor pelvis or hip injury
Division 10	Amputation of lower limbs
Subdivision 1	Amputation of both lower limbs
129	Loss of both lower limbs above or through the knee
130	Below the knee amputation of both lower limbs
Subdivision 2	Amputation of 1 lower limb
131	Above or through the knee amputation of 1 lower limb
132	Below the knee amputation of 1 lower limb
Division 11	Lower limb injuries, other than injuries mentioned in division 9 or 10 or divisions 12 to 15
133	Extreme lower limb injury, other than an injury mentioned in division 9 or 10 or divisions 12 to 15
134	Serious lower limb injury, other than an injury mentioned in division 9 or 10 or divisions 12 to 15
135	Moderate lower limb injury, other than an injury mentioned in division 9 or 10 or divisions 12 to 15
136	Minor lower limb injury, other than an injury mentioned in division 9 or 10 or divisions 12 to 15
Division 12	Knee injuries
137	Extreme knee injury
138	Serious knee injury
139	Moderate knee injury
140	Minor knee injury

Schedule 8	Dictionary	190

1 Short title

This regulation may be cited as the Civil Liability Regulation 2014.

2 Commencement

This regulation commences on 1 July 2014.

3 Definitions

Schedule 8 defines particular words used in this regulation.

4 Prescribed entities providing services to enhance public safety—Act, s 26(1)(a)

For section 26(1)(a) of the Act, each entity mentioned in schedule 1 is prescribed.

5 Prescribed entities providing services to enhance public safety—Act, s 27(1)

For section 27(1) of the Act, each entity mentioned in schedule 2 is prescribed.

Prescribed amount of damages for loss of consortium or loss of servitium—Act, s 58

For the Act, section 58(1)(b), the amount prescribed is—

- (a) for an injury arising on or after 2 December 2002 to and including 30 June 2010—\$30000; or
- (b) for an injury arising on or after 1 July 2010 to and including 30 June 2011—\$35340; or
- (c) for an injury arising on or after 1 July 2011 to and including 30 June 2012—\$36400; or
- (d) for an injury arising on or after 1 July 2012 to and including 30 June 2013—\$38390; or
- (e) for an injury arising on or after 1 July 2013 to and including 30 June 2014—\$40460; or

Page 10 2014 SL No. 129

(f) for an injury arising on or after 1 July 2014—\$41990.

7 Rules for assessing injury scale value—Act, s 61(1)(c)(i)

- (1) This section and schedules 3 to 6 provide the rules under which a court must assess the injury scale value for an injury.
- (2) Schedule 4 provides the ranges of injury scale values for particular injuries that the court is to consider in assessing the injury scale value for those injuries.
- (3) In assessing an injury scale value for an injury not mentioned in schedule 4, a court may have regard to the ranges prescribed in schedule 4 for other injuries.
- (4) Schedule 3 provides matters to which a court may or must have regard in applying schedule 4.
- (5) Schedule 6 provides the PIRS that may be used with schedule 4.
- (6) Schedule 5 provides—
 - (a) matters relevant to the application of schedule 6; and
 - (b) requirements with which a medical expert must comply in assessing a PIRS rating for a mental disorder of an injured person.

8 General damages calculation provisions—Act, s 62

For section 62 of the Act, the provisions prescribed as the general damages calculations provisions for an injury are—

- (a) for an injury on or after 2 December 2002 to and including on 30 June 2010—schedule 7, section 1; or
- (b) for an injury arising on or after 1 July 2010 to and including 30 June 2011—schedule 7, section 2; or
- (c) for an injury arising on or after 1 July 2011 to and including 30 June 2012—schedule 7, section 3; or
- (d) for an injury arising on or after 1 July 2012 to and including 30 June 2013—schedule 7, section 4; or

- (e) for an injury arising on or after 1 July 2013 to and including 30 June 2014—schedule 7, section 5; or
- (f) for an injury arising on or after 1 July 2014—schedule 7, section 6.

9 Prescribed amount of award for future loss—Act, s 64

For section 64 of the Act, the amount prescribed is—

- (a) for an injury arising on or after 2 December 2002 to and including 30 June 2010—\$100000; or
- (b) for an injury arising on or after 1 July 2010 to and including 30 June 2011—\$117800; or
- (c) for an injury arising on or after 1 July 2011 to and including 30 June 2012—\$121350; or
- (d) for an injury arising on or after 1 July 2012 to and including 30 June 2013—\$128000; or
- (e) for an injury arising on or after 1 July 2013 to and including 30 June 2014—\$134910; or
- (f) for an injury arising on or after 1 July 2014—\$140020.

10 Repeal

The Civil Liability Regulation 2003, SL No. 229 is repealed.

11 Transitional provision

- (1) Subject to sections 6, 8 and 9, the repealed regulation continues, despite its repeal, to apply to injuries arising before the commencement.
- (2) In this section—

commencement means the commencement of this section.

repealed regulation means the Civil Liability Regulation 2003 as in force immediately before the commencement.

Page 16 2014 SL No. 129

Schedule 3 Matters to which court may or must have regard in the application of schedule 4

section 7(1)

Part 1 Objectives of schedule 4 (Ranges of ISVs)

1 Objectives of sch 4

The objectives of schedule 4 include promoting—

- (a) consistency between assessments of general damages awarded by courts for similar injuries; and
- (b) similar assessments of general damages awarded by courts for different types of injury that have a similar level of adverse impact on an injured person.

Note—

For the assessment of an ISV by a court if general damages are to be awarded, see section 61 of the Act.

Part 2 How to use schedule 4

Division 1 Injury

2 Injury mentioned in sch 4

(1) In assessing the ISV for an injury mentioned in the injury column of schedule 4, a court must consider the range of ISVs stated in schedule 4 for the injury.

(2) The range of ISVs for the injury reflects the level of adverse impact of the injury on the injured person.

3 Multiple injuries

- (1) Subject to section 4, in assessing the ISV for multiple injuries, a court must consider the range of ISVs for the dominant injury of the multiple injuries.
- (2) To reflect the level of adverse impact of multiple injuries on an injured person, the court may assess the ISV for the multiple injuries as being higher in the range of ISVs for the dominant injury of the multiple injuries than the ISV the court would assess for the dominant injury only.

4 Multiple injuries and maximum dominant ISV inadequate

- (1) This section applies if a court considers the level of adverse impact of multiple injuries on an injured person is so severe that the maximum dominant ISV is inadequate to reflect the level of impact.
- (2) To reflect the level of impact, the court may make an assessment of the ISV for the multiple injuries that is higher than the maximum dominant ISV.
- (3) However, the ISV for the multiple injuries—
 - (a) must not be more than 100; and

Note-

Under section 61(1)(a) of the Act, an ISV is assessed on a scale running from 0 to 100.

- (b) should rarely be more than 25% higher than the maximum dominant ISV.
- (4) If the increase is more than 25% of the maximum dominant ISV, the court must give detailed written reasons for the increase.
- (5) In this section—

Page 18 2014 SL No. 129

maximum dominant ISV, in relation to multiple injuries, means the maximum ISV in the range for the dominant injury of the multiple injuries.

5 Adverse psychological reaction

- (1) This section applies if a court is assessing an ISV where an injured person has an adverse psychological reaction to a physical injury.
- (2) The court must treat the adverse psychological reaction merely as a feature of the injury.

6 Mental disorder

- (1) This section applies if—
 - (a) a court is assessing an ISV; and
 - (b) a PIRS rating for a mental disorder of an injured person is relevant under schedule 4.
- (2) The PIRS rating for the mental disorder of the injured person is the PIRS rating accepted by the court.
- (3) A PIRS rating is capable of being accepted by the court only if it is—
 - (a) assessed by a medical expert as required under schedules 5 and 6; and
 - (b) provided to the court in a PIRS report as required under schedule 5, section 12.

7 Aggravation of pre-existing condition

- (1) This section applies if an injured person has a pre-existing condition that is aggravated by an injury for which a court is assessing an ISV.
- (2) In considering the impact of the aggravation of the pre-existing condition, the court may have regard only to the extent to which the pre-existing condition has been made worse by the injury.

Division 2 Other matters

8 Court must have regard to particular provisions of sch 4

(1) In addition to providing ranges of ISVs for particular injuries, schedule 4 sets out provisions relevant to using schedule 4 to assess an ISV for particular injuries.

Examples of relevant provisions—

- examples of the injury
- examples of factors affecting ISV assessment
- comments about appropriate level of ISV
- (2) In assessing an ISV, a court must have regard to those provisions to the extent they are relevant in a particular case.
- (3) The fact that schedule 4 provides examples of factors affecting an ISV assessment is not intended to discourage a court from having regard to other factors it considers are relevant in a particular case.

9 Court may have regard to other matters

In assessing an ISV, a court may have regard to other matters to the extent they are relevant in a particular case.

Examples of other matters—

- the injured person's age, degree of insight, life expectancy, pain, suffering and loss of amenities of life
- the effects of a pre-existing condition of the injured person
- difficulties in life likely to have emerged for the injured person whether or not the injury happened
- in assessing an ISV for multiple injuries, the range for, and other provisions of schedule 4 in relation to, an injury other than the dominant injury of the multiple injuries

10 Whole person impairment

The extent of whole person impairment is an important consideration, but not the only consideration affecting the assessment of an ISV.

Page 20 2014 SL No. 129

11 Medical report stating whole person impairment percentage

If a medical report states a whole person impairment percentage, it must state how the percentage is calculated, including—

- (a) the clinical findings; and
- (b) how the impairment is calculated; and
- (c) if the percentage is based on criteria provided under AMA 5—
 - (i) the provisions of AMA 5 setting out the criteria; and
 - (ii) if a range of percentages is available under AMA 5 for an injury of the type being assessed—the reason for assessing the injury at the selected point in the range.

Notes—

- 1 It is not a function of a doctor to identify—
 - (a) the item in schedule 4 to which an injury belongs; or
 - (b) the appropriate ISV for an injury.
- A medical report tendered in evidence in a proceeding for a claim for personal injury damages must comply with the *Uniform Civil Procedure Rules 1999*, chapter 11, part 5.

12 Greater weight to assessments based on AMA 5

- (1) This section does not apply to a medical assessment of scarring or of a mental disorder.
- (2) In assessing an ISV, a court must give greater weight to a medical assessment of a whole person impairment percentage based on the criteria for the assessment of whole person impairment provided under AMA 5 than to a medical assessment of a whole person impairment percentage not based on the criteria.

13 Greater weight to assessments of PIRS rating

In assessing an ISV, a court must give greater weight to a PIRS report provided as required under schedule 5 than to another medical assessment of the permanent impairment caused by a mental disorder.

14 ISV must be a whole number

An ISV assessed by a court must be a whole number.

Note—

Under section 61(1)(a) of the Act, an ISV is assessed on a scale running from 0 to 100.

Page 22 2014 SL No. 129

Schedule 4 Ranges of ISVs

section 7(1)

Item Injury no.	Other provisions	Range of ISVs
Part 1	Central nervous system head injuries	n and
1 Quadriplegia	Examples of factors affecting ISV assessment • presence and extent of pain • extent of any residual movement • degree of insight • adverse psychological reaction • level of function and pre-existing function • degree of independence • ability to participate in daily activities, including employment • presence and extent of secondary medical complications Comment about appropriate level of ISV An ISV at or near the top of the range will be appropriate only if the injured person has assisted ventilation, full insight, extreme physical limitation and gross impairment of ability to communicate.	75 to 100

2	Paraplegia		60 to 80
		Examples of factors affecting ISV assessment	
		• presence and extent of pain	
		 extent of any residual movement 	
		adverse psychological reaction	
		• level of function and pre-existing function	
		• degree of independence	
		ability to participate in daily activities, including employment	
		• loss of reproductive or sexual function	
		• bowel or bladder incontinence	
		 presence and extent of secondary medical complications 	
:	Hemiplegia or severe paralysis of more than 1 limb		
		Comment for item 3	
		Incomplete paralysis causing whole person impairment of less than 40% must be assessed under part 6 if it is the only injury or the dominant injury of multiple injuries.	
		Examples of factors affecting ISV assessment for item 3	
		The same examples apply as for item 2.	

Page 24 2014 SL No. 129

3.1		Complete or nearly complete paralysis	60 to 80
3.2		Other paralysis, causing whole person impairment of at least 40%	45 to 60
4	Monoplegia		
		Comment	
		See items 5, 6 and 7 and part 6.	
5	Extreme brain injury		
		Comment	
		The injury will involve major trauma to the brain with severe permanent impairment.	
5.1		Substantial insight remaining	71 to 100
		Comment about appropriate level of ISV for item 5.1	
		• An ISV at or near the top of the range will be appropriate only if the injured person needs full-time nursing care and has the following—	
		 substantial insight despite gross disturbance of brain function 	
		 significant physical limitation and destruction of pre-existing lifestyle 	
		 epileptic seizures 	
		 double incontinence 	
		• little or no language function	
		 little or no meaningful response to environment. 	

• An injured person with an injury for which an ISV at or near the top of the range is appropriate may have some ability to follow basic commands, recovery of eye opening, return of postural reflex movement and return to pre-existing sleep patterns.

Examples of factors affecting ISV assessment for item 5.1

- degree of insight
- life expectancy
- extent of bodily impairment

5.2

Substantially reduced insight Comment for items 5.2.1 and 5.2.2

- The injured person will have major trauma to the brain with severe permanent impairment.
- The injured person's insight of his or her condition may change.
- Insight may be impaired in the degree, or continuity of, appreciation of the injured person's condition.

Examples of factors affecting ISV assessment for items 5.2.1 and 5.2.2

The same examples apply as for an item 5.1 injury, but reducing levels of insight progressively reduce the level of suffering and the appropriate level of ISV.

Page 26 2014 SL No. 129

5.2.1	The injured person will have partial or complete insight (as evidenced by appropriate responses to physical or emotional stimuli) for not more than half of the person's waking hours.	36 to 70
5.2.2	The injured person will have infrequent periods of partial insight and will show unreliable, rare or limited responses to physical or emotional stimuli.	16 to 35
5.3	Grossly reduced insight	10 to 15
6 Serious brain	Comment for item 5.3 The injured person will be in a persistent vegetative state and have little or no insight. Comment about appropriate level of ISV for item 5.3 If some minor awareness of loss remains, an ISV at or near the top of the range may be appropriate.	56 to 70
injury		
	Comment	
	The injured person will be very seriously disabled.	
	Example of the injury	
	serious brain damage causing—	
	(a) physical impairment, for example, limb paralysis; or	
	(b) cognitive impairment with marked impairment of intellect and personality	

Examples of factors affecting ISV assessment

- degree of insight
- life expectancy
- extent of physical limitations
- extent of cognitive limitations
- extent of sensory limitation, for example, limitation of hearing or sense of taste or smell
- level of function and pre-existing function
- degree of independence
- ability to communicate
- behavioural or psychological changes
- epilepsy or a high risk of epilepsy
- presence of and extent of secondary medical complications

Comment about appropriate level of ISV

An ISV at or near the top of the range will be appropriate only if the injured person substantially depends on others and needs substantial professional and other care.

Page 28 2014 SL No. 129

7 Moderate brain injury		21 to 55
	Comment	
	The injured person will be seriously disabled, but the degree of the injured person's dependence on others, although still present, is lower than for an item 6 injury. Examples of factors affecting ISV assessment	
	degree of insight	
	life expectancy	
	• extent of physical limitations	
	• extent of cognitive limitations	
	• extent of sensory limitation, for example, limitation of hearing or sense of taste or smell	
	• level of function and pre-existing function	
	degree of independence	
	ability to communicate	
	 behavioural or psychological changes 	
	• epilepsy or a high risk of epilepsy	
	• presence of, and extent of, secondary medical complications	

Comment about appropriate level of ISV

- An ISV of 21 to 25 will be appropriate if there is reduced concentration and memory, or reduced mood control, and either or both—
 - reduced capacity for employment
 - a noticeable interference with lifestyle and leisure.
- An ISV of 26 to 40 will be appropriate if there is an increased risk of epilepsy and either or both—
 - a moderate cognitive impairment
 - loss of, or greatly reduced capacity for, employment.
- An ISV of 41 to 55 will be appropriate if there is no capacity for employment, and 1 or more of the following—
 - moderate to severe cognitive impairment
 - marked personality change
 - dramatic effect on speech, sight or other senses
 - epilepsy or a high risk of epilepsy.

Page 30 2014 SL No. 129

8 Minor brain injury		6 to 20
	Comment	
	The injured person will make a good recovery and be able to take part in normal social life and to return to work. There may be minor problems persisting that prevent a restoration of normal function. Examples of factors affecting ISV assessment	
	• severity of any physical injury causing the brain damage, having regard to—	
	(a) any medical assessment made immediately after the injury was caused, for example, CT or MRI scans, an ambulance officer's assessment or hospital emergency unit assessment; and	
	(b) any post-traumatic amnesia.	
	• extent of any ongoing, and possibly permanent, disability	
	• extent of any personality change	
	• depression	
	• degree of insight	
	life expectancy	
	• extent of physical limitations	
	• extent of cognitive limitations	
	• extent of sensory limitation, for example, limitation of hearing or sense of taste or smell	

	• level of function and pre-existing function	
	• degree of independence	
	• ability to communicate	
	• behavioural or psychological changes	
	• epilepsy or a high risk of epilepsy	
	• presence of, and extent of, secondary medical complications	
	Comment about appropriate level of ISV	
	An ISV at or near the top of the range will be appropriate if the injured person has—	
	(a) an increased risk of epilepsy; and	
	(b) ongoing reduced concentration and memory, or reduced mood control, that does not significantly interfere with the person's ability to take part in normal social life or return to work.	
9 Minor head injury, other than an injury mentioned in part 3		0 to 5
	Comment	
	Brain damage, if any, is minimal. Examples of the injury	
	• uncomplicated skull fracture	

Page 32 2014 SL No. 129

 concussion with transitory loss of consciousness and no residual effects

Examples of factors affecting ISV assessment

- severity of any physical injury causing brain damage
- length of time to recover from any symptoms
- extent of ongoing symptoms
- presence, or absence of, headaches

Comment about appropriate level of ISV

- An ISV at or near the bottom of the range will be appropriate for an injury from which the injured person fully recovers within a few weeks.
- An ISV at or near the top of the range will be appropriate if there is an uncomplicated skull fracture and there are associated concussive symptoms of dizziness, headache and memory loss persisting for less than 6 months.

Part 2	Mental disorders	
	General comment for items 10 to 13	
	This part includes references to ratings on the psychiatric impairment rating scale set out in schedule 6 (<i>PIRS ratings</i>). A PIRS rating is capable of being accepted by a court only if it is assessed by a medical expert as required under schedules 5 and 6 and provided to the court in a PIRS report. Examples of factors affecting ISV assessment for items 10 to 13	
	PIRS rating	
	degree of insight	
	age and life expectancy	
	pain and suffering	
	• loss of amenities of life	
	• likelihood difficulties would have emerged in any event	
	• if there is extreme psychological trauma, for example, intense helplessness or horror, the immediate adverse psychological reaction	
10 Extreme mental		41 to 65
disorder		
	Example of the injury	
	a mental disorder with a PIRS rating between 31% and 100%	

Page 34 2014 SL No. 129

		Comment about appropriate level of ISV	
		Despite a very high PIRS rating, an ISV at or near the bottom of the range may be appropriate if the injured person has reduced insight.	
11	Serious mental disorder		11 to 40
		Example of the injury	
		a mental disorder with a PIRS rating between 11% and 30%	
12	Moderate mental disorder		2 to 10
		Comment	
		There is generally only moderate impairment.	
		Example of the injury	
		a mental disorder with a PIRS rating between 4% and 10%	
13	Minor mental disorder		0 to 1
		Comment	
		For many persons who have suffered the injury there will be little or no impact on their lives.	
		Example of the injury	
		a mental disorder with a PIRS rating between 0% and 3%	

Part 3	Facial injuries	
Division 1	Skeletal injuries of the facial area	
	Examples of factors affecting ISV assessment for items 14 to 22	
	• extent of skeletal or functional damage	
	• degree of cosmetic damage or disfigurement	
	• adverse psychological reaction	
	• availability of cosmetic repair	
14 Extreme facial injury		26 to 45
	Comment	
	The injury will involve severe traumatic injury to the face requiring substantial reconstructive surgery.	
	Examples of the injury	
	a Le Fort I fracture or Le Fort II fracture if the degree of incapacity and disfigurement after reconstructive surgery will be very severe	
	• a Le Fort III fracture causing incapacity in daily activities	
	Note— Le Fort I fracture, Le Fort II fracture and Le Fort III fracture are defined in schedule 8 (Dictionary).	
	Additional example of factor affecting ISV assessment	
	the extent of any neurological impairment or effect on the airway	

Page 36 2014 SL No. 129

15	Serious facial injury		14 to 25
		Comment	
		The injury will involve serious traumatic injury to the face requiring reconstructive surgery that is not substantial.	
		Examples of the injury	
		a Le Fort I fracture or Le Fort II fracture if the degree of incapacity and disfigurement after reconstructive surgery will not be very severe	
		a Le Fort III fracture if no serious deformity will remain after reconstructive surgery	
		• a serious or multiple fracture of the nasal complex either or both—	
		(a) requiring more than 1 operation; and	
		(b) causing 1 or more of the following—	
		 permanent damage to the airway 	
		 permanent damage to nerves or tear ducts 	
		 facial deformity 	
		a serious cheekbone fracture that will require surgery and cause serious disfigurement and permanent effects despite reconstructive surgery, for example, hyperaesthesia or paraesthesia	

- a very serious multiple jaw fracture that will—
 - (a) require prolonged treatment; and
 - (b) despite reconstructive surgery, cause permanent effects, for example, severe pain, restriction in eating, paraesthesia or a risk of arthritis in the joints
- a severed trunk of the facial nerve (7th cranial nerve), causing total paralysis of facial muscles on 1 side of the face

Additional examples of factors affecting ISV assessment

- any neurological impairment or effect on the airway
- permanent cosmetic deformity

Comment about appropriate level of ISV

- An ISV at or near the bottom of the range will be appropriate if the injury causes permanent cosmetic deformity, asymmetry of 1 side of the face and limited adverse psychological reaction.
- An ISV at or near the top of the range will be appropriate if the injury causes serious bilateral deformity and significant adverse psychological reaction.

Page 38 2014 SL No. 129

16 Moderate facial injury	Examples of the injury	6 to 13
	a simple cheekbone fracture, requiring minor reconstructive surgery, from which the injured person will fully recover with little or no cosmetic damage	
	• a fracture of the jaw causing—	
	(a) permanent effects, for example, difficulty in opening the mouth or in eating; or	
	(b) hyperaesthesia or paraesthesia in the area of the fracture	
	a displaced fracture of the nasal complex from which the injured person will almost fully recover after surgery	
	• severed branches of the facial nerve (7th cranial nerve) with paralysis of some of the facial muscles	
	a severed sensory nerve of the face with minor permanent paraesthesia	
17 Minor facial		0 to 5
injury	Examples of the injury	
	a simple cheekbone fracture, for which surgery is not required and from which the injured person will recover fully	

a simple jaw fracture, requiring immobilisation and from which the injured person will fully recover a stable fracture of the joint process of the jaw a displaced fracture of the nasal complex requiring only manipulation a simple undisplaced fracture of the nasal complex, from which the injured person will fully recover a severed sensory nerve of the face, with good repair causing minimal or no paraesthesia 18 Injury to teeth or gums Comment There will generally have been a course of treatment as a result of the injury. Additional examples of factors affecting ISV assessment extent and degree of discomfort during treatment difficulty with eating Comment about appropriate level of ISV If protracted dentistry causes the injury, the ISV may be higher than the ISV for the same injury caused by something else.

Page 40 2014 SL No. 129

18.1	Loss of or serious damage to more than 3 teeth, serious gum injury or serious gum infection	6 to 10
18.2	Loss of or serious damage to 2 or 3 teeth, moderate gum injury or moderate gum infection	3 to 5
18.3	Loss of or serious damage to 1 tooth, minor gum injury or minor gum infection	0 to 2
Division 2	Scarring to the face	
	General comment for items 19 to 22	
	This division will usually apply to an injury involving skeletal damage only if the skeletal damage is minor.	
19 Extreme facial scarring		21 to 45
- Country	Examples of the injury	
	• widespread area scarring, for example, over the side of the face or another whole area	
	severe contour deformity	
	• significant deformity of the	
	mouth or eyelids with muscle paralysis or tic	

Schedule 4

		 An ISV at or near the top of the range will be appropriate if the injury is caused by burns that resulted in loss of the entire nose, eyelids or ears. 	
20	Serious facial		11 to 20
	scarring	Examples of the injury	
		Examples of the injury	
		 substantial disfigurement and significant adverse psychological reaction 	
		 severe linear scarring 	
		discoloured hypertrophic (keloid) scarring	
		 atrophic scarring 	
		 serious contour defects 	
21	Moderate facial scarring	Command	6 to 10
		Comment	
		Any adverse psychological reaction is small, or having been considerable at the outset, has greatly diminished.	
		Examples of the injury	
		scarring, the worst effects of which will be reduced by plastic surgery that will leave minor cosmetic damage	
		 scars crossing lines of election with discoloured, indurated, hypertrophic or atrophic 	

Page 42 2014 SL No. 129

22 Minor facial scarring		0 to 5
	Examples of the injury	
	a single scar able to be camouflaged	
	• more than 1 very small scar if the overall effect of the scars is to mar, but not markedly to affect, appearance and adverse psychological reaction is minor	
	• almost invisible linear scarring, in lines of election, with normal texture and elevation	
Part 4	Injuries affecting the se	nses
Division 1	General comment	
	General comment for items 23 to 33	
	General comment for items 23 to 33 Injuries mentioned in this part are commonly symptoms of brain or nervous system injury.	
Division 2	Injuries mentioned in this part are commonly symptoms of brain or	
Division 2 23 Total sight and hearing impairment	Injuries mentioned in this part are commonly symptoms of brain or nervous system injury.	90 to 100
23 Total sight and hearing	Injuries mentioned in this part are commonly symptoms of brain or nervous system injury.	90 to 100
23 Total sight and hearing	Injuries mentioned in this part are commonly symptoms of brain or nervous system injury. Injuries affecting the eyes	90 to 100
23 Total sight and hearing	Injuries mentioned in this part are commonly symptoms of brain or nervous system injury. Injuries affecting the eyes Comment The injury ranks with the most	90 to 100
23 Total sight and hearing	Injuries mentioned in this part are commonly symptoms of brain or nervous system injury. Injuries affecting the eyes Comment The injury ranks with the most devastating injuries. Examples of factors affecting ISV	90 to 100

Schedule 4

24	Total sight impairment		50 to 80
		Examples of factors affecting ISV assessment	
		degree of insight	
		age and life expectancy	
25	Complete sight impairment in 1 eye with reduced vision in the other eye		25 to 50
		Comment about appropriate level of ISV	
		An ISV at or near the top of the range will be appropriate if there is serious risk of further significant deterioration in the remaining eye.	
26	Complete sight impairment in 1 eye or total loss of 1 eye		26 to 30
		Examples of factors affecting ISV assessment	
		• the extent to which the injured person's activities are adversely affected by the impairment or loss	
		associated scarring or cosmetic damage	

Page 44 2014 SL No. 129

		Comment about appropriate level of	
		ISV	
		An ISV at or near the top of the range will be appropriate if there is a minor risk of sympathetic ophthalmia.	
27	Serious eye injury		11 to 25
		Examples of the injury	
		a serious but incomplete loss of vision in 1 eye without significant risk of loss or reduction of vision in the other eye	
		an injury causing double vision that is not minor and intermittent	
28	Moderate eye injury		6 to 10
		Example of the injury	
		minor but permanent impairment of vision in one eye, including if there is double vision that is minor and intermittent	
29	Minor eye injury		0 to 5
	, ,	Examples of the injury	
		a minor injury, for example, from being struck in the eye, exposed to smoke or other fumes or being splashed by liquids— (a) causing initial pain and temporary interference with vision; and	

		1
	(b) from which the injured person will fully recover within a relatively short time	
Division 3	Injuries affecting the ears	
	Comment for items 30 to 33 The injuries commonly, but not	
	always, involve hearing loss. If the injury is to a single ear, the binaural loss must be assessed.	
	Examples of factors affecting ISV assessment for item 30 to 33 injuries	
	 whether the injury has an immediate effect, allowing the injured person no opportunity to adapt, or whether it occurred over a period of time, for example, from exposure to noise 	
	 whether the injury was suffered at an early age so that it has affected or will affect speech 	
	• whether the injury will affect balance	
	• the extent to which former activities will be affected	
	• presence of tinnitus	
30 Extreme ear injury		36 to 55
	Definition of injury	
	The injury involves a binaural hearing loss of at least 80%.	

Page 46 2014 SL No. 129

	Additional examples of factors	
	affecting ISV assessment	
	• associated problems, for example, severe tinnitus, moderate vertigo, a moderate vestibular disturbance or headaches	
	 availability of hearing aids or other devices that may reduce the hearing loss 	
	Comment about appropriate level of ISV	
	An ISV at or near the top of the range will be appropriate if the injury happened at an early age so as to prevent or to seriously affect the development of normal speech.	
31 Serious ear injury		26 to 35
	Definition of injury	
	The injury involves—	
	(a) a binaural hearing loss of at least 50% but less than 80%; or	
	(b) severe permanent vestibular disturbance.	
	Comment about appropriate level of ISV	
	An ISV in the lower half of the range will be appropriate if there is no speech impairment or tinnitus.	
	An ISV in the upper half of the range will be appropriate if there is speech impairment and tinnitus.	

32	Moderate ear injury		11 to 25
		Definition of injury	
		The injury involves—	
		(a) a binaural hearing loss of at least 20% but less than 50%; or	
		(b) significant permanent vestibular disturbance.	
		Comment about appropriate level of ISV	
		An ISV at or near the top of the range will be appropriate if there are problems associated with the injury, for example, severe tinnitus, moderate vertigo, a moderate vestibular disturbance or headaches.	
33	Minor ear injury		
		Definition of injury	
		The injury involves a binaural hearing loss of less than 20%.	
		Comment	
		• This item covers the bulk of hearing impairment cases.	
		• The injury is not to be judged simply by the degree of hearing loss.	
		• There will often be a degree of tinnitus present.	
		There may also be minor vertigo or a minor vestibular disturbance causing loss of balance.	
		A vestibular disturbance may increase the level of ISV.	

Page 48 2014 SL No. 129

	1	İ
33.1	Moderate tinnitus or hearing loss, or both	6 to 10
33.2	Mild tinnitus with some hearing loss	4 to 5
33.3	Slight or occasional tinnitus with slight hearing loss or an occasional vestibular disturbance, or both	0 to 3
Division 4	Impairment of taste or sme	ell
34 Total loss of taste or smell, or both		6 to 9
	Comment about appropriate level of ISV	
	• An ISV at or near the bottom of the range will be appropriate if there will be a total loss of either taste or smell.	
	• An ISV at or near the top of the range will be appropriate if there will be a total loss of both taste and smell.	
35 Partial loss of smell or taste, or both		0 to 5
	Comment about appropriate level of ISV	
	 An ISV at or near the bottom of the range will be appropriate if there will be a partial loss of either taste or smell. 	
	• An ISV at or near the top of the range will be appropriate if there will be a partial loss of both taste and smell.	

Par	rt 5	Injuries to internal orga	ns
Div	ision 1	Chest injuries	
		Example of factor affecting ISV assessment for items 36 to 39	
		the level of any reduction in the capacity for employment and enjoyment of life	
36	Extreme chest injury		46 to 65
		Comment	
		The injury will involve severe traumatic injury to the chest, or a large majority of the organs in the chest cavity, causing a high level of disability and ongoing medical problems.	
		Comment about appropriate level of ISV	
		An ISV at or near the top of the range will be appropriate if there will be total removal of 1 lung or serious heart damage, or both, with serious and prolonged pain and suffering and significant permanent scarring.	
37	Serious chest injury		21 to 45
		Comment	
		The injury will involve serious traumatic injury to the chest or organs in the chest cavity, causing serious disability and ongoing medical problems.	

Page 50 2014 SL No. 129

	Examples of the injury	
	• a trauma to 1 or more of the following, causing permanent damage, physical disability and impairment of function—	
	• the chest	
	• the heart	
	• 1 or both of the lungs	
	• the diaphragm	
	• an injury that causes the need for oxygen therapy for about 16 to 18 hours a day	
	Example of factors affecting ISV assessment	
	The need for a permanent tracheostomy	
	Comment about appropriate level of ISV	
	An ISV at or near the top of the range will be appropriate if, after recovery, there are both of the following—	
	(a) serious impairment to cardio-pulmonary function;	
	(b) whole person impairment for the injury of, or of nearly, 40%.	
38 Moderate chest injury		11 to 20
chest injury	Example of the injury	
	the injury will involve serious traumatic injury to the chest or organs in the chest cavity, causing moderate disability and ongoing medical problems	

Examples of factors affecting ISV assessment

- duration and intensity of pain and suffering
- the degree of permanent impairment of lung or cardiac function, as evidenced by objective test results
- the need for a temporary tracheostomy for short-term airway management

Comment about appropriate level of ISV

- An ISV at or near the bottom of the range will be appropriate if there will be the loss of a breast without significant adverse psychological reaction.
- An ISV in the lower half of the range will be appropriate if there was a pneumothorax, or haemothorax, requiring intercostal catheter insertion.
- An ISV at or near the top of the range will be appropriate if there are multiple rib fractures causing—
 - (a) a flail segment (flail chest) requiring mechanical ventilation in the acute stage; and
 - (b) moderate permanent impairment of cardio-pulmonary function.

Page 52 2014 SL No. 129

39 Minor chest injury		
, ,	Examples of factors affecting ISV assessment for items 39.1 and 39.2	
	complexity of any fractures	
	• extent of injury to underlying organs	
	extent of any disability	
	• duration and intensity of pain and suffering	
39.1	Complicated or significant fracture, or internal organ injury, that substantially resolves	5 to 10
	Comment	
	The injury will involve significant or complicated fractures, or internal injuries, that cause some tissue damage but no significant long-term effect on organ function.	
	Examples of the injury	
	• multiple fractures of the ribs or sternum, or both, that may cause cardio-pulmonary contusion	
	• internal injuries that cause some tissue damage but no significant long-term effect on organ function	
	Comment about appropriate level of ISV	
	• An ISV at or near the bottom of the range will be appropriate if there is a fractured sternum that substantially resolves, and there is some ongoing pain and activity restriction.	

	A TOY A ALL CAL	
	 An ISV at or near the top of the range will be appropriate if the injury causes significant persisting pain and significant activity restriction. 	
39.2	Soft tissue injury, minor fracture or minor internal organ injury	0 to 4
	Comment	
	• The injury will involve a soft tissue injury, minor fracture, or minor and non-permanent injury to internal organs.	
	• There may be persistent pain from the chest, for example, from the chest wall or sternocostal or costochondral joints.	
	Examples of the injury	
	• a single penetrating wound, causing some tissue damage but no long-term effect on lung function	
	 an injury to the lungs caused by the inhalation of toxic fumes or smoke that will not permanently interfere with lung function 	
	• a soft tissue injury to the chest wall, for example, a laceration or serious seatbelt bruising	
	 fractured ribs or a minor fracture of the sternum causing serious pain and disability for weeks, without internal organ damage or permanent disability 	

Page 54 2014 SL No. 129

	 Comment about appropriate level of ISV An ISV at or near the bottom of the range will be appropriate if there is a soft tissue injury from which the injured person will fully recover. An ISV at or near the top of the range will be appropriate if there is an injury causing a small pneumothorax that does not require intercostal catheter insertion, and from which the injured person will fully recover. 	
Division 2	Lung injury other than asth	nma
	The level of an ISV for lung disease often reflects the fact that the disease is worsening and there is a risk of the development of secondary medical consequences. Examples of factors affecting ISV assessment for items 40 to 43	
	 a history of smoking tobacco will reduce the level of ISV adverse psychological reaction may increase the level of ISV 	
40 Extreme lung injury		46 to 65
iiijai y	Examples of the injury	
	 diagnosed lung cancer lung disease involving serious disability causing severe pain and dramatic impairment of function and quality of life 	

	a recurrent pulmonary embolism resulting in failure of the right side of the heart requiring a lung transplant, heart transplant or both Additional examples of factors affecting ISV assessment	
	agelikelihood of progressive worsening	
	• duration and intensity of pain and suffering	
41 Serious lung injury		
41.1	Serious lung injury if progressive worsening of lung function Example of item 41.1	25 to 45
	lung disease, for example, emphysema, causing—	
	• significantly reduced and worsening lung function	
	• prolonged and frequent coughing	
	• disturbance of sleep	
	 restriction of physical activity, employment and enjoyment of life 	
	Additional examples of factors affecting ISV assessment for item 41.1	
	 the possibility of lung cancer developing may increase the level of ISV the need for continuous oxygen therapy 	

Page 56 2014 SL No. 129

41.2	Serious lung injury if no progressive worsening of lung function Examples of item 41.2	11 to 24
	 lung disease causing breathing difficulties, short of disabling breathlessness, requiring frequent use of an inhaler lung disease causing a significant effect on employment and social life, including inability to tolerate a smoky environment, with an uncertain prognosis 	
	• a recurrent pulmonary embolism causing pulmonary hypertension and cor pulmonale	
42 Moderate lung injury	Examples of the injury	6 to 10
	bronchitis that does not cause serious symptoms, with little or no serious or permanent effect on employment or social life	
	• a pulmonary embolism requiring anticoagulant therapy for at least 1 year or pulmonary endarterectomy	
43 Minor lung injury		0 to 5
, y	Examples of the injury	
	• lung disease causing slight breathlessness, with—	
	(a) no effect on employment; and	

Schedule 4

	 (b) the likelihood of substantial and permanent recovery within a few years after the injury is caused a pulmonary embolism requiring anticoagulant therapy for less than 1 year Comment about appropriate level of ISV An ISV at or near the bottom of the range will be appropriate if there is 	
	lung disease causing temporary aggravation of bronchitis, or other chest problems, that will resolve within a few months.	
Division 3	Asthma	
44 Extreme asthma		31 to 55
	Comment	
	Comment The most serious cases may confine a person to the home and destroy capacity for employment. Example of the injury	
	The most serious cases may confine a person to the home and destroy capacity for employment.	
	The most serious cases may confine a person to the home and destroy capacity for employment. Example of the injury severe and permanent disabling	
	The most serious cases may confine a person to the home and destroy capacity for employment. Example of the injury severe and permanent disabling asthma causing— prolonged and frequent	
	The most serious cases may confine a person to the home and destroy capacity for employment. Example of the injury severe and permanent disabling asthma causing— prolonged and frequent coughing	

Page 58 2014 SL No. 129

45	Severe asthma		11 to 30
		Example of the injury	
		chronic asthma, with a poor prognosis, causing—	
		 breathing difficulties 	
		• the need to frequently use an inhaler	
		• significantly reduced capacity for employment.	
46	Moderate asthma		6 to 10
		Example of the injury	
		asthma, with symptoms that include bronchitis and wheezing, affecting employment or social life	
47	Minor asthma		0 to 5
		Example of the injury	
		asthma with minor symptoms that has no effect on employment or social life	
		Comment about appropriate level of ISV	
		An ISV at or near the bottom of the range will be appropriate if there is asthma treated by a general practitioner that will resolve within 1 year after the injury is caused.	

Division 4	Injuries to male reproduction system	ve
	General comment for items 48 to 51	
	This division applies to injuries caused by physical trauma rather than as a secondary result of a mental disorder.	
	• For a mental disorder that causes loss of reproductive system function, see part 2 (Mental disorders).	
	• Sterility is usually either—	
	(a) caused by surgery, chemicals or disease; or	
	(b) caused by a traumatic injury that is often aggravated by scarring.	
	Examples of factors affecting ISV assessment for items 48 to 51	
	adverse psychological reaction	
	effect on social and domestic life	
48 Impotence and sterility		5 to 37
	Additional examples of factors affecting ISV assessment	
	• age	
	• whether the injured person has children	
	whether the injured person intended to have children or more children	

Page 60 2014 SL No. 129

Comment about appropriate level of **ISV** An ISV at or near the bottom of the range will be appropriate if the sterility has little impact. An ISV in the lower half of the range will be appropriate if an injured person with children may have intended to have children has more and uncomplicated sterility, without impotence or any aggravating features. An ISV in the upper half of the range will be appropriate if a young injured person without children has uncomplicated sterility, without impotence or any aggravating features. An ISV at or near the middle of the range will be appropriate if a middle-aged injured person with children has sterility and permanent impotence. An ISV at or near the top of the range will be appropriate if a young injured person has total impotence and loss of sexual function and sterility. 49 Loss of part 5 to 25 or all of penis Additional examples of factors affecting ISV assessment extent of the penis remaining availability of a prosthesis extent to which sexual activity will be possible

50 Loss of both testicles		
	Comment	
	See item 48 because sterility results.	
	Additional example of factor affecting ISV assessment	
	level of any pain or residual scarring	
51 Loss of 1 testicle		2 to 10
	Additional example of factors affecting ISV assessment	
	age, cosmetic damage or scarring	
	Comment about appropriate level of ISV	
	An ISV at or near the bottom of the range will be appropriate if the injury does not reduce reproductive	
	capacity.	
Division 5		ctive
Division 5	capacity. Injuries to female reproduce	ctive
Division 5	Injuries to female reproduct system	ctive
Division 5	capacity. Injuries to female reproduct system General comment for items 52 to 54 This division applies to injuries caused by physical trauma rather than as a secondary result	ctive
Division 5	capacity. Injuries to female reproductive system General comment for items 52 to 54 This division applies to injuries caused by physical trauma rather than as a secondary result of a mental disorder. For a mental disorder that causes loss of reproductive system function, see part 2	ctive

Page 62 2014 SL No. 129

	 whether the injured person has children whether the injured person intended to have children or more children age scarring 	
	 depression or adverse psychological reaction effect on social and domestic life 	
52 Infertility		
52.1	Infertility causing severe effects Example of item 52.1	16 to 35
	infertility with severe depression, anxiety and pain	
52.2	Infertility causing moderate effects Example of item 52.2	9 to 15
	infertility without any medical complication if the injured person has a child or children Comment about appropriate level of	
	An ISV at or near the top of the range will be appropriate if there is significant adverse psychological reaction.	
52.3	Infertility causing minor effects	0 to 8
	Example of item 52.3	
	infertility if—	
	(a) the injured person was unlikely to have had children, for example, because of age; and	

Schedule 4

	(b) there is little or no adverse psychological reaction	
53 Any other injury to the female reproductive system		
53.1	Post-menopausal hysterectomy	5 to 15
53.2	Female impotence	5 to 15
	Comment for item 53.2	
	The injury may be correctable by surgery.	
	Additional example of factors affecting ISV assessment for item 53.2	
	the level of sexual function or the extent of any corrective surgery	
53.3	An injury causing an inability to give birth by normal vaginal delivery, for example, because of pelvic ring disruption or deformity	4 to 15
	Comment for item 53.3	
	The injury may be correctable by surgery.	
53.4	Injury to female genitalia or reproductive organs, or both	3 to 25
	Comment about appropriate level of ISV for item 53.4	
	• An ISV at or near the bottom of the range will be appropriate if there is a laceration or tear with good repair.	
	• An ISV at or near the middle of the range will be appropriate if the injury causes development of a prolapse or fistula.	

Page 64 2014 SL No. 129

	1 1011	
	• An ISV at or near the top of the	
	range will be appropriate if the injury causes the early onset of	
	menopause or irregular	
	hormonal activity.	
53.5	Reduced fertility, caused by, for	3 to 8
	example, trauma to ovaries or	
	fallopian tubes	
	Comment about appropriate level of ISV for item 53.5	
	An ISV in the lower half of the	
	range will be appropriate if the	
	injury is caused by a delay in	
	diagnosis of an ectopic pregnancy.	
54 Failed sterilisation leading to unwanted		
pregnancy		
54.1	If no child is born and there is no	3 to 10
	serious adverse psychological reaction	
	Comment for item 54.1	
	For a mental disorder, see part 2 (Mental disorders).	
54.2	If a child is born	15 to 25
	Comment about appropriate level of ISV for item 54.2	
	An ISV at or near the top of the range will be appropriate if there is a difficult pregnancy or birth, or both, followed by medical problems, for example, post-natal depression.	

Division 6	Injuries to digestive system	n
Subdivision 1	Injury caused by trauma	
55 Extreme injury to the digestive system caused by trauma		19 to 40
	Examples of the injury	
	severe permanent damage to the digestive system, with ongoing debilitating pain and discomfort, diarrhoea, nausea and vomiting that—	
	(a) are not controllable by drugs; and	
	(b) cause weight loss of at least 20%.	
	Note—	
	Digestive system is defined in schedule 8 (Dictionary).	
	• an injury to the throat requiring a permanent gastrostomy	
	Comment about appropriate level of ISV	
	• An ISV at or near the bottom of the range will be appropriate if there is an injury to the throat requiring a temporary gastrostomy for more than 1 year and permanent dietary changes, for example, a requirement for a soft food diet.	

Page 66 2014 SL No. 129

		An ISV at or near the top of the range will be appropriate if there is an injury to the throat requiring a permanent gastrostomy, with significant ongoing symptoms. camples of factors affecting ISV seessment	
	•	the extent of any voice or speech impairment	
	•	need for ongoing endoscopic procedures	
dige syste	y to the stive em sed by		11 to 18
	Ex	camples of the injury	
	•	a serious injury causing long-term complications aggravated by physical strain	
	•	an injury requiring a feeding tube for between 3 and 12 months	
		camples of factors affecting ISV sessment	
	•	the extent of any ongoing voice or speech impairment	
	•	whether a feeding tube was required, and if so, for how long it was required	

57	Moderate injury to the digestive system caused by trauma	Everyles of the injury	6 to 10
		Examples of the injury	
		• a simple penetrating stab wound, causing some permanent tissue damage, but with no significant long-term effect on digestive function	
		• an injury requiring a feeding tube for less than 3 months	
		Examples of factors affecting ISV assessment	
		• whether a feeding tube was required, and if so, for how long it was required	
		 whether dietary changes are required to reduce the risk of aspiration because of impaired swallowing 	
58	Minor injury to the digestive system caused by trauma		0 to 5
		Examples of the injury	
		a soft tissue injury to the abdomen wall, for example, a laceration or serious seatbelt bruising to the abdomen or flank, or both	

Page 68 2014 SL No. 129

		,
	• a minor injury to the throat or tongue causing temporary difficulties with swallowing or speech	
	• a laceration of the tongue requiring suturing	
Subdivision 2	Injury not caused by traum	ıa
	General comment for items 59 to 62	
	There is a marked difference between those comparatively rare cases having a long-term or even permanent effect on quality of life and cases in which the only ongoing symptom is an allergy, for example, to specific foods, that may cause short-term illness.	
59 Extreme injury to the digestive system not caused by trauma		13 to 35
	Example of the injury	
	severe toxicosis—	
	(a) causing serious acute pain, vomiting, diarrhoea and fever, requiring hospitalisation for days or weeks; and	
	(b) also causing 1 or more of the following—	
	 ongoing incontinence 	
	 haemorrhoids 	
	 irritable bowel syndrome; and 	

		(c) having a significant impact on the capacity for employment and enjoyment of life Comment about appropriate level of ISV An ISV in the lower half of the range will be appropriate if the injury causes a chronic infection, that requires prolonged hospitalisation, that will not resolve after antibiotic treatment for 1 year.	
60	Serious injury to the digestive system not caused by trauma	 serious but short-term food poisoning causing diarrhoea and vomiting— (a) diminishing over 2 to 4 weeks; and (b) with some remaining discomfort and disturbance of bowel function and impact on sex life and enjoyment of food, over a few years constant abdominal pain, causing significant discomfort, for up to 18 months caused by a delay in diagnosis of an injury 	6 to 12

Page 70 2014 SL No. 129

Comment about appropriate level of ISV

- An ISV at or near the top of the range will be appropriate if there is an adverse response to the administration of a drug that—
 - (a) requires admission to an intensive care unit; and
 - (b) does not cause any permanent impairment; and
 - (c) causes the need for ongoing drug therapy for life.
- An ISV in the upper half of the range will be appropriate if a chronic infection—
 - (a) requires prolonged hospitalisation and additional treatment; and
 - (b) will be resolved by antibiotic treatment within 1 year.
- An ISV at or near the bottom of the range will be appropriate if there is an adverse response to the administration of a drug that—
 - (a) requires admission to an intensive care unit; and
 - (b) does not cause any permanent impairment; and
 - (c) does not cause the need for ongoing drug therapy for life.

61 Moderate injury to t digestive system no caused by trauma	he ot	3 to 5
	Examples of the injury	
	• food poisoning—	
	(a) causing significant discomfort, stomach cramps, change of bowel function and fatigue; and	
	(b) requiring hospitalisation for days; and	
	(c) with symptoms lasting a few weeks; and	
	(d) from which the injured person will fully recover within 1 or 2 years	
	 an infection that is resolved by antibiotic treatment, with or without additional treatment in hospital, within 3 months after the injury is caused 	
	• an adverse response to the administration of a drug, causing any of the following continuing over a period of more than 7 days and requiring hospitalisation—	
	(a) vomiting;	
	(b) shortness of breath;	
	(c) hypertension;	
	(d) skin irritation	

Page 72 2014 SL No. 129

62 Minor injury to the digestive system not caused by trauma		0 to 2
	Examples of the injury	
	 disabling pain, cramps and diarrhoea, ongoing for days or weeks 	
	• a localised infection, requiring antibiotic treatment, that heals within 6 weeks after the start of treatment	
	• an adverse response to the administration of a drug, causing any of the following continuing over a period of not more than 7 days, and not requiring hospitalisation—	
	(a) vomiting;	
	(b) shortness of breath;	
	(c) hypertension;	
	(d) skin irritation	
	 intermittent abdominal pain for up to 6 months caused by a delay in diagnosis of an injury to the digestive system 	
Division 7	Kidney or ureter injuries	
	General comment for items 63 to 66	
	An injury to a ureter or the ureters alone, without loss of, or serious damage to, a kidney will generally be assessed under item 65 or 66.	

Schedule 4

63 Extreme	 Examples of factors affecting ISV assessment for items 63 to 66 age risk of ongoing kidney or ureter problems, complications or symptoms need for future medical procedures 	
injury to kidneys or ureters		
63.1	Loss of both kidneys causing loss of renal function and requiring permanent dialysis or transplant	56 to 75
63.2	Serious damage to both kidneys, requiring temporary or intermittent dialysis Examples of factors affecting ISV assessment	31 to 55
	the effect of dialysis and loss of kidney function on activities of daily living	
	• the length of time for which dialysis was required or the frequency of intermittent dialysis	
	ongoing requirement for medication, for example, to control blood pressure	
	• whether the injury caused the need for dietary changes, and if so, for how long	

Page 74 2014 SL No. 129

		,	
		 An ISV at or near the bottom of the range will be appropriate if dialysis was required for an initial 3 month period, with intermittent dialysis required after that. An ISV at or near the top of the range will be appropriate if the injury required dialysis for about 1 year and ongoing dietary changes and medication. 	
64	Serious injury to kidneys or ureters		19 to 30
		Comment	
		The injury may require temporary dialysis for less than 3 months.	
		Example of the injury	
		loss of 1 kidney if there is severe damage to, and a risk of loss of function of, the other kidney	
		Comment about appropriate level of ISV	
		The higher the risk of loss of function of the other kidney, the higher the ISV.	
65	Moderate injury to kidneys or ureters		11 to 18
		Examples of the injury	
		loss of 1 kidney, with no damage to the other kidney	

Schedule 4

CC Min an industry	an injury to a ureter or the ureters that requires surgery or placement of stents	
66 Minor injury to kidneys or ureters		0 to 10
	Example of the injury	
	a laceration or contusion to 1 or both of the kidneys	
	Comment about appropriate level of ISV	
	• An ISV at or near the bottom of the range will be appropriate if there is an injury to a kidney causing a contusion.	
	 An ISV at or near the top of the range will be appropriate if a partial removal of a kidney is required. 	
Division 8	Liver, gall bladder or biliary injuries	y tract
	Examples of factors affecting ISV assessment for items 67 to 70	
	• whether there are recurrent episodes of infection or obstruction	
	• whether there is a risk of developing biliary cirrhosis	

Page 76 2014 SL No. 129

67	Extreme injury to liver, gall bladder or biliary tract		51 to 70
		Example of the injury	
		loss, or injury causing effective loss, of liver function, requiring constant substitutional therapy	
		Comment about appropriate level of ISV	
		• An ISV at or near the bottom of the range will be appropriate if there are recurrent episodes of liver failure that require hospital admission and medical management but do not require liver transplantation.	
		• An ISV at or near the top of the range will be appropriate if the injury requires liver transplantation.	
68	Serious injury to liver, gall bladder or biliary tract		36 to 50
		Example of the injury	
		serious damage causing loss of over 30% of the tissue of the liver, but with some functional capacity of the liver remaining	

69 Modera injury t gall bla or bilia tract	o liver, dder	16 to 35
	Example of the injury	
	a laceration or contusion to the liver, with a moderate effect on liver function Comment about appropriate level of ISV	
	• An ISV at or near the bottom of the range will be appropriate if the injury causes impaired liver function with symptoms of intermittent nausea and vomiting.	
	• An ISV at or near the bottom of the range will also be appropriate if there is a gall bladder injury with recurrent infection or symptomatic stone disease, the symptoms of which may include, for example, pain or jaundice.	
	 An ISV at or near the middle of the range will be appropriate if the injury involves removal of the gall bladder causing a bile duct injury. 	
	• An ISV at or near the top of the range will be appropriate if—	
	(a) surgery is required to remove not more than 30% of the liver; or	
	(b) bile ducts require repair, for example, placement of stents.	

Page 78 2014 SL No. 129

	An ISV at or near the top of the	
	range will also be appropriate if	
	there is an injury to the gall	
	bladder, that despite biliary	
	surgery, causes ongoing symptoms, infection or the need	
	for further endoscopic surgery.	
70 Minor injury to liver, gall bladder or biliary duct		3 to 15
	Comment	
	An injury within this item should not require surgery to the liver.	
	Example of the injury	
	a laceration or contusion to the liver, with a minor effect on liver function	
	Comment about appropriate level of ISV	
	An ISV in the lower half of the	
	range will be appropriate if there is	
	an uncomplicated removal of the gall bladder with no ongoing	
	gall bladder with no ongoing symptoms.	
Division 9	Bowel injuries	
	Examples of factors affecting ISV assessment for items 71 to 74	
	• age	
	• risk of ongoing bowel problems, complications or symptoms	
	need for future surgery	
	the degree to which dietary changes are required to manage chronic pain or diarrhoea caused by the injury	

Schedule 4

71	Extreme bowel injury		41 to 60
		Example of the injury	
		an injury causing a total loss of natural bowel function and dependence on colostomy	
72	Serious bowel injury		19 to 40
	bower mjary	Example of the injury	
		a serious abdominal injury causing either or both of the following—	
		(a) impairment of bowel function (which often requires permanent or long-term colostomy, leaving disfiguring scars);	
		(b) restrictions on employment and diet	
73	Moderate bowel injury		7 to 18
		Comment about appropriate level of ISV	
		• An ISV at or near the bottom of the range will be appropriate if—	
		(a) the injury requires an ileostomy or colostomy for less than 3 months; and	
		(b) bowel function returns to normal; and	
		(c) there are no ongoing symptoms.	
		• An ISV at or near the top of the range will be appropriate if—	

Page 80 2014 SL No. 129

	(a) the injury requires	
	temporary surgical	
	diversion of the bowel, for	
	example, an ileostomy or colostomy; and	
	(b) there is ongoing intermittent abnormal	
	bowel function requiring medication.	
74 Minor bowel injury		3 to 6
	Example of the injury	
	an injury causing tears to the bowel,	
	with minimal ongoing bowel	
	problems	
Division 10	Bladder, prostate or urethr	a
	injuries	
	injuries Examples of factors affecting ISV assessment for items 75 to 78	
	Examples of factors affecting ISV	
	Examples of factors affecting ISV assessment for items 75 to 78 • age • risk of ongoing bladder, prostate	
	Examples of factors affecting ISV assessment for items 75 to 78 • age	
	Examples of factors affecting ISV assessment for items 75 to 78 age risk of ongoing bladder, prostate or urethra problems,	
75 Extreme bladder, prostate or	Examples of factors affecting ISV assessment for items 75 to 78 age risk of ongoing bladder, prostate or urethra problems, complications or symptoms	40 to 60
bladder,	Examples of factors affecting ISV assessment for items 75 to 78 age risk of ongoing bladder, prostate or urethra problems, complications or symptoms	40 to 60
bladder, prostate or	Examples of factors affecting ISV assessment for items 75 to 78 age risk of ongoing bladder, prostate or urethra problems, complications or symptoms	40 to 60
bladder, prostate or	Examples of factors affecting ISV assessment for items 75 to 78 • age • risk of ongoing bladder, prostate or urethra problems, complications or symptoms • need for future surgery	40 to 60

76	Serious bladder, prostate or urethra injury		19 to 39
		Example of the injury	
		an injury causing serious impairment of bladder control, with some incontinence Comment about appropriate level of ISV	
		An ISV in the upper half of the range will be appropriate if there is serious ongoing pain.	
77	Moderate bladder, prostate or urethra injury		7 to 18
		Example of the injury	
		an injury causing continued impairment of bladder control, with minimal incontinence and minimal pain	
		Comment about appropriate level of ISV	
		• An ISV at or near the bottom of the range will be appropriate if there is a laceration of the urethra, that required surgical repair and caused intermittent infection or bladder dysfunction.	
		• An ISV at or near the top of the range will be appropriate if there is—	

Page 82 2014 SL No. 129

	(a) increased urinary frequency of more than once every 2 hours throughout the day and more than 3 times at night that is unresponsive to treatment; or (b) an ongoing requirement for minor surgery, for	
78 Minor bladder, prostate or urethra injury	example, cystoscopy or urethral dilation.	3 to 6
	Example of the injury	
	a bladder injury, from which the injured person will fully recover, with some relatively long-term interference with natural bladder function	
Division 11	Spleen and pancreas injuri	es
79 Injuries to the pancreas	 Comment about appropriate level of ISV An ISV at or near the bottom of the range will be appropriate if there is a contusion to the pancreas that heals. An ISV at or near the middle of the range will be appropriate if there are chronic symptoms, for example, pain or diarrhoea. 	10 to 35
	• An ISV at or near the top of the range will be appropriate if—	

	 (a) there are chronic symptoms with significant weight loss of between 10% and 20% of body weight, and pancreatic enzyme replacement is required; or (b) an injury to the pancreas causes diabetes. Examples of factors affecting ISV assessment the extent of any ongoing risk of internal infection and disorders, for example, diabetes the need for, and outcome of, further surgery, for example, surgery to manage pain caused by stone disease, infection or an 	
80 Loss of spleen (complicated)	Example of the injury loss of spleen if there will be a risk, that is not minor, of ongoing internal infection and disorders caused by the loss Comment about appropriate level of ISV • An ISV at or near the bottom of the range will be appropriate if the injury leads to a splenectomy, with intermittent symptoms of pain, nausea and vomiting that settle.	8 to 20

Page 84 2014 SL No. 129

	1		
		 An ISV at or near the middle of the range will be appropriate if— 	
		(a) the injury leads to a splenectomy, with serious infection after the splenectomy; and	
		(b) the infection requires surgical or radiological intervention.	
		• An ISV at or near the top of the range will be appropriate if the injury leads to a splenectomy, with portal vein thrombosis after the splenectomy.	
81	Injury to the spleen or uncomplicated loss of spleen		0 to 7
	•	Example of the injury	
		laceration or contusion to the spleen that—	
		(a) has been radiologically confirmed; and	
		(b) has no ongoing bleeding; and	
		(c) is managed conservatively; and	
		(d) resolves fully	
		Comment about appropriate level of ISV	
		An ISV at or near the top of the range will be appropriate if there has been removal of the spleen (splenectomy), with little or no risk	

Divi	sion 12	Hernia injuries	
82	Severe hernia		11 to 20
		Example of the injury	
		a hernia if after repair there is either or both—	
		(a) ongoing pain; or	
		(b) a restriction on physical activities, sport or employment	
83	Moderate hernia		6 to 10
		Example of the injury	
		a hernia that after repair has some real risk of recurring in the short-term	
84	Minor hernia		0 to 5
		Example of the injury	
		an uncomplicated inguinal hernia, whether or not repaired	
Par	t 6	Orthopaedic injuries	
Divi	sion 1	Cervical spine injuries	
		General comment for items 85 to 89	
		 This division does not apply to the following injuries (that are dealt with in items 1 to 3)— quadriplegia 	
		paraplegia	
		 hemiplegia or severe paralysis of more than 1 limb. 	

Page 86 2014 SL No. 129

	than the to 3, 1 severe minor work suffered. • Symptonerve damage	ed for 2 or 3 weeks. oms associated with root compression or the can not be taken into	
	under objecti nerve damag	nt in assessing an ISV item 85, 86 or 87 unless ive signs are present of root compression or te, for example—	
	_	T or MRI scans or other adiological evidence	
		uscle wasting	
	te w	inical findings of deep endon reflex loss, motor reakness and loss of ensation.	
85 Extrer cervic injury	e Il spine		41 to 75
	Comment		
	that cause movement with perform The injury upper impairment of an adap	extremely severe injuries se gross limitation of and serious interference rmance of daily activities. It will involve significant or lower extremity and may require the use thive device or prosthesis.	
	• a tota single	l neurological loss at a level	

		1
	• severe multilevel neurological dysfunction	
	• structural compromise of the spinal canal with extreme upper or lower extremity motor and sensory impairments	
	• fractures involving more than 50% compression of a vertebral body with neural compromise	
	Comment about appropriate level of ISV	
	• An ISV at or near the bottom of the range will be appropriate if there is whole person impairment of about 29%.	
	• An ISV at or near the top of the range will be appropriate if there is a cervical spine injury causing monoplegia of the dominant upper limb and whole person impairment of at least 60%.	
86 Serious cervical spine injury		16 to 40
iiijai y	Comment	
	• The injury will cause serious upper extremity impairment or serious permanent impairment of the cervical spine.	
	The injury may involve—	
	(a) a change of motion segment integrity; or	
	(b) bilateral or multilevel nerve root compression or damage.	

Page 88 2014 SL No. 129

Examples of the injury

- loss of motion in a motion segment because of a surgical or post-traumatic fusion
- a fracture involving more than 25% compression of 1 vertebral body
- an injury showing objective signs of nerve root damage after surgery

Comment about appropriate level of ISV

- An ISV at or near the bottom of the range will be appropriate if—
 - (a) the injured person has had surgery and symptoms persist; or
 - (b) there is a fracture involving 25% compression of 1 vertebral body.
- An ISV in the middle of the range will be appropriate if there is a fracture involving about 50% compression of a vertebral body, with ongoing pain.
- An ISV at or near the top of the range will be appropriate if—

	 (a) the injured person has had a fusion of vertebral bodies that has failed, leaving objective signs of significant residual nerve root damage and ongoing pain, affecting 1 side of the body; and (b) there is whole person in the significant residual nerve root damage and ongoing pain, affecting 1 side of the body; and 	
87 Moderate cervical spine injury—fracture, disc prolapse or nerve root compressi on or damage	Comment about appropriate level of ISV	5 to 15
	 An ISV at or near the top of the range will be appropriate if — (a) there is a disc prolapse for which there is radiological evidence at an anatomically correct level; and (b) there are symptoms of pain and 3 or more of the following objective signs that are anatomically localised to an appropriate spinal nerve root distribution— (i) sensory loss; (ii) loss of muscle strength; (iii) loss of reflexes; (iv) unilateral atrophy; and 	

Page 90 2014 SL No. 129

		 (c) the impairment has not improved after non-operative treatment. An ISV of about 10 will be appropriate if there is a fracture of a vertebral body with up to 25% compression, and ongoing pain. An ISV at or near the bottom of the range will be appropriate for an uncomplicated fracture of a posterior element of 1 or more of the vertebral segments, for example, spinous or transverse processes, without neurological impairment. 	
88	Moderate cervical spine		5 to 10
	injury—soft tissue injury		
		Comment	
		The injury will cause moderate permanent impairment, for which there is objective evidence, of the cervical spine.	
		The injury will cause moderate permanent impairment, for which there is objective evidence, of the	

89	Minor cervical spine injury		0 to 4
		Comment	
		• Injuries within this item include a whiplash injury with no ongoing symptoms, other than symptoms that are merely a nuisance, remaining more than 18 months after the injury is caused.	
		• There will be no objective signs of neurological impairment.	
		Example of the injury	
		a soft tissue or whiplash injury if symptoms are minor and the injured person recovers, or is expected to recover, from the injury to a level where the injury is merely a nuisance within 18 months after the injury is caused Comment about appropriate level of	
		ISV	
		• An ISV at or near the bottom of the range will be appropriate if the injury will resolve without any ongoing symptoms within months after the injury is caused.	
		• An ISV at or near the top of the range will be appropriate if the injury, despite improvement, causes headaches and some ongoing pain.	

Page 92 2014 SL No. 129

Division 2 Thoracic spine or lumbar spine injuries General comment for items 90 to 94 This division does not apply to the following injuries (that are dealt with in items 1 to 3) quadriplegia paraplegia hemiplegia or severe paralysis of more than 1 limb. Thoracic or lumbar spine injuries, other than those dealt with in items 1 to 3, range from cases of very severe disability to cases of a minor strain, with no time off work and symptoms suffered only for 2 or 3 weeks. **Symptoms** associated with nerve root compression damage can not be taken into account in assessing an ISV under item 90, 91 or 92 unless objective signs are present of nerve root compression damage, for example— CT or MRI scans or other radiological evidence muscle wasting clinical findings of deep tendon reflex loss, motor weakness and loss of sensation.

90 **Extreme** 36 to 60 thoracic or **lumbar** spine injury Comment These are extremely severe injuries causing gross limitation movement and serious interference with performance of daily activities. There may be some motor or sensory loss, and some impairment of bladder, ano-rectal or sexual function. **Example of the injury** a fracture involving compression of a thoracic or lumbar vertebral body ofmore than 50%. with neurological impairment Comment about appropriate level of ISV An ISV at or near the bottom of the range will be appropriate if whole person there is impairment for the injury of 25%. An ISV at or near the top of the range will be appropriate if person there is whole impairment for the injury of at least 45%.

Page 94 2014 SL No. 129

91	Serious thoracic or lumbar spine injury		16 to 35
		Comment	
		• The injury will cause serious permanent impairment in the thoracic or lumbar spine.	
		The injury may involve—	
		(a) bilateral or multilevel nerve root damage; or	
		(b) a change in motion segment integrity, for example, because of surgery.	
		Example of the injury	
		a fracture involving at least 25% compression of 1 thoracic or lumbar vertebral body	
		Comment about appropriate level of ISV	
		• An ISV at or near the bottom of the range will be appropriate if—	
		(a) the injured person has had surgery and symptoms persist; or	
		(b) there is a fracture involving 25% compression of 1 vertebral body.	
		• An ISV in the middle of the range will be appropriate if there is a fracture involving 50% compression of a vertebral body, with ongoing pain.	

	 An ISV at or near the top of the range will be appropriate if the injured person has had a fusion of vertebral bodies that has failed— (a) leaving objective signs of significant residual nerve root damage and ongoing pain, affecting 1 side of the body; and
	(b) causing whole person impairment of 24%.
92 Moderate thoracic or lumbar spine injury—fracture, disc prolapse or nerve root compression or damage	Comment about appropriate level of ISV
	• An ISV at or near the top of the range will be appropriate if—
	(a) there is a disc prolapse for which there is radiological evidence at an anatomically correct level; and
	(b) there are symptoms of pain and 3 or more of the following objective signs, that are anatomically localised to an appropriate spinal nerve root
	distribution—
	distribution— (i) sensory loss; (ii) loss of muscle

Page 96 2014 SL No. 129

93 Moderate thoracic or lumbar spine injury—soft tissue injury	 (iii) loss of reflexes; (iv) unilateral atrophy; and (c) the impairment has not improved after non-operative treatment. An ISV of about 10 will be appropriate if there is a fracture of a vertebral body with up to 25% compression, and ongoing pain. An ISV at or near the bottom of the range will be appropriate for an uncomplicated fracture of a posterior element of 1 or more of the vertebral segments, for example spinous or transverse processes, without neurological impairment. Comment Comment impairment, for which there is objective evidence, of the thoracic or lumbar spine. Comment about appropriate level of ISV 	5 to 10
	thoracic or lumbar spine. Comment about appropriate level of ISV	
	An ISV of not more than 10 will be appropriate if there is whole person impairment of 8% caused by a soft tissue injury for which there is no radiological evidence.	

94	Minor thoracic or lumbar spine injury		0 to 4
		Example of the injury	
		a soft tissue injury of the thoracic or lumbar spine with no—	
		significant clinical findings	
		• fractures	
		• documented neurological impairment	
		• significant loss of motion segment integrity	
		• other objective signs of impairment relating to the injury	
		Comment about appropriate level of ISV	
		• An ISV at or near the top of the range will be appropriate, whether or not the injured person continues to suffer some ongoing pain, if the injury will substantially reach maximum medical improvement, with only minor symptoms, within about 18 months after the injury is caused.	
		• An ISV at or near the bottom of the range will be appropriate if the injury will resolve without any ongoing symptoms within months after the injury is caused.	

Page 98 2014 SL No. 129

Division 3	Shoulder injuries	
	General comment for items 95 to 98	
	• Injuries under items 95 to 98 include subluxations or dislocations of the sternoclavicular joint, acromioclavicular joint or glenohumeral joint.	
	• Soft tissue injuries may involve the musculoligamentous supporting structures of the joints.	
	• Fractures may involve the clavicle, the scapula (shoulder blade) and the humerus.	
	Comment about appropriate level of ISV for items 95 to 98	
	An ISV at or near the top of the range will generally only be appropriate if the injury is to the shoulder of the dominant upper limb.	
95 Extreme shoulder injury		31 to 50
iiijui y	Comment	
	These are the most severe traumatic injuries causing gross permanent impairment.	
	Examples of the injury	
	a severe fracture or dislocation, with secondary medical complications	
	joint disruption with poor outcome after surgerydegloving	
	30510 ving	

		• permanent nerve palsies Additional comment about appropriate level of ISV An ISV at or near the top of the range will be appropriate if there is whole person impairment of 45% and complete loss of all shoulder	
96	Serious shoulder	function of the dominant upper limb.	16 to 30
	injury	Comment	
		The injury will involve serious trauma to the shoulder causing serious permanent impairment.	
		Examples of the injury	
		a crush injury	
		a serious fracture with secondary arthritis	
		 nerve palsies from which the injured person will partially recover 	
		established non-union of a clavicular or scapular fracture despite open reduction and internal fixation (ORIF)	
		• established non-union of a clavicular or scapular fracture if surgery is not appropriate or not possible, and there is significant functional impairment	

Page 100 2014 SL No. 129

		Additional comment about appropriate level of ISV An ISV at or near the top of the range will be appropriate if there is whole person impairment for the injury of 25% and the injury is to the dominant upper limb.	
97	Moderate shoulder injury	traumatic adhesive capsulitis with discomfort, limitation of movement and symptoms persisting or expected to persist	6 to 15
		for about 2 years • permanent and significant soft tissue disruption, for example, from tendon tears or ligament tears	
		• a fracture, from which the injured person has made a reasonable recovery, requiring open reduction and internal fixation	
		 nerve palsies from which the injured person has made a good recovery 	
		• painful persisting dislocation of the acromioclavicular joint	
		an injury to the sternoclavicular joint causing permanent, painful instability	

	 Additional comment about appropriate level of ISV An ISV at or near the bottom of the range will be appropriate if there is whole person impairment for the injury of 6%. An ISV at or near the top of the range will be appropriate if there is whole person impairment for the injury of 12% and the injury is to the dominant upper limb. 	
98 Minor shoulder injury	 soft tissue injury with considerable pain from which the injured person makes an almost full recovery in less than 18 months fracture from which the injured person has made an uncomplicated recovery strain injury of the acromioclavicular joint or sternoclavicular joint 	0 to 5
Division 4	Amputation of upper limbs	,
	Comment about appropriate level of ISV for items 99 to 100.3 An ISV at or near the top of the range will generally only be appropriate if the amputation is of the dominant upper limb.	

Page 102 2014 SL No. 129

99 Loss of both upper limbs or loss of 1 arm and extreme injury to the other ar	·,	55 to 85
	The effect of the injury is to reduce the injured person to a state of considerable helplessness. Examples of factors affecting ISV assessment	
	• whether the amputations are above or below the elbow (the loss of the elbow joint adds greatly to the disability)	
	• the length of any stump suitable for use with a prosthesis	
	severity of any phantom pains	
	Additional comment about appropriate level of ISV	
	• An ISV of 70 to 85 will be appropriate if—	
	(a) both upper limbs are amputated at the shoulder; or	
	(b) 1 arm is amputated at the shoulder, and there is a loss of function in the other arm, causing whole person impairment of 60%.	
	• An ISV of 65 to 80 will be appropriate if—	

	 (a) both upper limbs are amputated through the elbow or above the elbow but below the shoulder; or (b) 1 arm is amputated through the elbow or above the elbow but below the shoulder, and there is a loss of function in the other arm, causing whole person impairment of 57%. An ISV of 55 to 75 will be appropriate if— (a) both upper limbs are amputated below the elbow; or (b) 1 arm is amputated below the elbow, and there is a loss of function in the other arm, causing whole person impairment of 54%. 	
100 Loss of 1 upper limb	 Examples of factors affecting ISV assessment whether the amputation is above or below the elbow (the loss of the elbow joint adds greatly to the disability) whether the amputation was of the dominant arm the length of any stump suitable for use with a prosthesis severity of any phantom pains extent of any disability in the other arm 	

Page 104 2014 SL No. 129

100.1	An upper limb amputation at the shoulder	50 to 65
100.2	An upper limb amputation through the elbow or above the elbow but below the shoulder Additional comment about appropriate level of ISV for item	40 to 65
	 An ISV at or near the bottom of the range will generally be appropriate if there is an amputation through the elbow. An ISV at or near the top of the range will be appropriate if there is a short stump because a short stump may create difficulties in the use of a prosthesis. 	
100.3	An upper limb amputation below the elbow	35 to 60
	the elbow	
	Additional comment about appropriate level of ISV for item 100.3	
	Additional comment about appropriate level of ISV for item	
Division 5	Additional comment about appropriate level of ISV for item 100.3 An ISV at or near the top of the range will be appropriate if there is an amputation through the forearm with residual severe pain in the	
Division 5	Additional comment about appropriate level of ISV for item 100.3 An ISV at or near the top of the range will be appropriate if there is an amputation through the forearm with residual severe pain in the stump and phantom pains.	

101	Extreme elbow injury		26 to 50
		Comment	
		The injury will involve an extremely severe elbow injury, falling short of amputation, leaving little effective use of the elbow joint.	
		Examples of the injury	
		• whole person impairment for the injury of between 24% and 42%	
		a complex elbow fracture, or dislocation, with secondary complications	
		• joint disruption, with poor outcome after surgery	
		• degloving	
		• permanent nerve palsies	
		• an injury causing severe limitation of elbow movement with the joint constrained in a non-functional position	
102	Serious elbow injury		13 to 25
		Comment	
		The injury will involve significant disability and require major surgery.	
		Examples of the injury	
		• a serious fracture with secondary arthritis	
		a crush injury	
		 nerve palsies from which the injured person will partially recover 	

Page 106 2014 SL No. 129

	 permanent, poor restriction of range of motion with the elbow constrained in a satisfactory functional position Additional comment about appropriate level of ISV 	
	An ISV at or near the top of the range will be appropriate if there is whole person impairment for the injury of 23% and the injury is to the elbow of the dominant upper limb.	
103 Moderate elbow injury		6 to 12
	Comment	
	The injury will cause moderate long-term disability but does not require protracted surgery. Examples of the injury	
	• soft tissue disruption, for example, a ligament or tendon tear	
	• a fracture, from which the injured person has made a reasonable recovery, requiring open reduction and internal fixation	
	• nerve palsies from which the injured person has made a good recovery	
	Additional comment about appropriate level of ISV	
	• An ISV at or near the bottom of the range will be appropriate if there is whole person impairment for the injury of 5%.	

104 Minor elbow	• An ISV at or near the top of the range will be appropriate if there is a moderately severe injury to the elbow of the dominant upper limb— (a) requiring prolonged treatment; and (b) causing whole person impairment of 10%.	0 to 5
injury	Comment	
	The injury will cause no permanent damage and no permanent impairment of function. Examples of the injury	
	• a fracture with an	
	 uncomplicated recovery a soft tissue injury with pain, minor tennis elbow syndrome or lacerations 	
Division 6	Wrist injuries	
	Comment about appropriate level of ISV for items 105 to 108	
	An ISV at or near the top of the range will generally only be appropriate if the injury is to the wrist of the dominant upper limb.	
105 Extreme wrist injury		25 to 40
, y	Comment	
	The injury will involve severe fractures, or a dislocation, causing a high level of permanent impairment.	

Page 108 2014 SL No. 129

		Examples of the injury	
		• a severe fracture or dislocation with secondary joint complications	
		• joint disruption with poor outcome after surgery	
		• degloving	
		 permanent nerve palsies 	
		Additional comment about appropriate level of ISV	
		An ISV at or near the top of the range will be appropriate if there is whole person impairment for the injury of 36% and the injury is to the wrist of the dominant upper limb.	
106	Serious wrist injury		16 to 24
	ju. y	Examples of the injury	
		• an injury causing significant permanent loss of wrist function, for example, severe problems with gripping or pushing objects, but with some useful movement remaining	
		• non-union of a carpal fracture	
		• severe carpal instability	
		Additional comment about appropriate level of ISV	
		An ISV at or near the top of the	

107 Moderate wrist injury		6 to 15
	Examples of the injury	
	• a wrist injury that is not serious and causes some permanent disability, for example, some persisting pain and stiffness	
	• persisting radio-ulnar instability	
	 recurrent tendon subluxation or entrapment 	
	Additional comment about appropriate level of ISV	
	 An ISV at or near the bottom of the range will be appropriate if there is whole person impairment for the injury of 6%. An ISV at or near the top of the range will be appropriate if there is whole person impairment for the injury of 12%. 	
108 Minor wrist injury		0 to 5
	Examples of the injury	
	 a fracture from which the injured person almost fully recovers a soft tissue injury, for example, 	
	severe bruising	
	• continued pain following carpal tunnel release	

Page 110 2014 SL No. 129

Division 7	Hand injuries	
	General comment for items 109 to 120	
	Hands are cosmetically and functionally the most important part of the upper limbs.	
	Comment about appropriate level of ISV for items 109 to 120	
	• The appropriate ISV for loss of a hand is only a little less than the appropriate ISV for the loss of the relevant arm.	
	• An ISV at or near the top of the range will generally be appropriate if the injury is to the dominant hand.	
109 Total or effective loss of both hands		51 to 75
	Example of the injury	
	a serious injury causing extensive damage to both hands making them little more than useless	
	Examples of factors affecting ISV assessment	
	the level of residual capacity left in either hand	
	• severity of any phantom pains if there has been an amputation or amputations	

	Additional comment about
	appropriate level of ISV
	• An ISV at or near the bottom of the range will be appropriate if both hands remain attached to the forearms and are of some cosmetic importance.
	 An ISV at or near the top of the range will be appropriate if both hands are amputated through the wrist.
110 Serious injury to hands	both 40 to 50
	Comment
	The injury will involve significant loss of function in both hands, for example, loss of 50% or more of the use of each hand.
111 Total or effective of 1 han	
	Examples of the injury
	a crushed hand that has been surgically amputated
	 traumatic amputation of all fingers and most of the palm
	Example of factor affecting ISV assessment
	severity of any phantom pain if there has been an amputation

Page 112 2014 SL No. 129

	 Additional comment about appropriate level of ISV An ISV at or near the bottom of the range will be appropriate if there has been an amputation of the fingers at the metacarpophalangeal joints, but the thumb remains, and there is whole person impairment for the injury of 32%. An ISV at or near the top of the range will be appropriate if— (a) there has been amputation of the dominant hand at the wrist; and (b) there is residual severe pain in the stump and ongoing complications, for example, chronic regional 	
112 Amputation	pain syndrome or neuroma formation.	15 to 28
of the thumb or part of the thumb		15 to 20
	Examples of factors affecting ISV assessment	
	• the level of amputation, for example, at carpo metacarpal (CMC) joint, through the distal third of the thumb metacarpal, at the metacarpophalangeal (MCP) joint or thumb interphalangeal (IP) joint	
	• whether the injury is to the dominant hand	
	• the extent of any damage to the fingers	

	Additional comment about appropriate level of ISV	
	 An ISV at or near the bottom of the range will be appropriate if— (a) there has been an amputation through the interphalangeal joint of the thumb; and 	
	(b) there is whole person impairment for the injury of 11%.	
	• An ISV at or near the middle of the range will be appropriate if there has been an amputation through the proximal phalanx.	
	• An ISV at or near the top of the range will be appropriate if—	
	(a) there has been an amputation at the base of the thumb at the carpometacarpal (CMC) joint level of the dominant hand; and	
	(b) there are ongoing debilitating complications.	
113 Amputation of index, middle and ring fingers, or any 2 of them		15 to 30
	Comment	
	The amputation will cause complete loss or nearly complete loss of 2 or all of the following fingers of the hand—	

Page 114 2014 SL No. 129

- index finger
- middle finger
- ring finger.

Example of factor affecting ISV assessment

the level of the amputation, for example, whether the hand has been made to be of very little use and any remaining grip is very weak

Additional comment about appropriate level of ISV

- An ISV at or near the bottom of the range will be appropriate if 2 fingers, whether index, middle or ring fingers, are amputated at the level of the proximal interphalangeal joints.
- An ISV at or near the middle of the range will be appropriate if there is whole person impairment for the injury of 19%.
- An ISV at or near the top of the range will be appropriate if—
 - (a) the index, middle and ring fingers are amputated at the level of the metacarpophalangeal joint (MCP joint) or there is whole person impairment for the injury of at least 27%; and
 - (b) the injury is to the dominant hand.

114 Amputation of individual fingers	Examples of factors affecting ISV	5 to 20
	assessment	
	• whether the amputation was of the index or middle finger	
	• the level of the amputation	
	• any damage to other fingers short of amputation	
	Additional comment about appropriate level of ISV	
	• An ISV at or near the bottom of the range will be appropriate if—	
	(a) there has been an amputation at the level of the distal interphalangeal joint of the little or ring finger; or	
	(b) there is whole person impairment for the injury of 3%.	
	• An ISV of not more than 11 will be appropriate if—	
	(a) there has been an amputation of the index or middle finger at the proximal interphalangeal joint (PIP joint); or	
	(b) there is whole person impairment for the injury of 8%.	

Page 116 2014 SL No. 129

		• An ISV at or near the top of the range will be appropriate if there is complete loss of the index or middle finger of the dominant hand, and serious impairment of the remaining fingers causing whole person impairment of at least 15%.	
115	Amputation of thumb and all fingers	Comment	
		As the injury will cause effective loss of the hand, see item 111.	
116	Any other injury to 1 or more of the fingers or the thumb		
		Comment about appropriate level of ISV for items 116.1 to 116.4	
		An ISV of not more than 5 will be appropriate if substantial function of the hand remains.	
		Examples of factors affecting ISV	
		• whether the injury is to the thumb, or index or middle finger	
		any damage to other fingers	
		whether the injury is to the dominant hand	

116.1	Extreme injury to 1 or more of the fingers or the thumb	16 to 25
	Example of the injury	
	total loss of function of 1 or more of the fingers, with the joints ankylosed in non-functional positions Additional comment about appropriate level of ISV	
	• An ISV at or near the bottom of the range will be appropriate if there is whole person impairment for the injury of 14%.	
	• An ISV at or near the top of the range will be appropriate if there is an injury to the thumb of the dominant hand causing total loss of function of the thumb.	
116.2	Serious injury to 1 or more of the fingers or the thumb	11 to 15
	Examples of the injury	
	a severe crush injury causing ankylosis of the fingers	
	a bursting wound, or an injury causing severe finger damage, causing residual scarring and dysfunction	
	• an injury leaving a digit that interferes with the remaining function of the hand	
	• division of 1 or more of the long flexor tendons of the finger, with unsuccessful repair	

Page 118 2014 SL No. 129

116.3	Moderate injury to 1 or more of the fingers or the thumb Comment	6 to 10
	There will be permanent discomfort, pain or sensitive scarring Examples of the injury	
	 moderate injury to the thumb or index finger causing loss of movement or dexterity 	
	• a crush injury causing multiple fractures of 2 or more fingers	
	• division of 1 or more of the long flexor tendons of the finger, with moderately successful repair	
	Additional comment about appropriate level of ISV	
	An ISV at or near the top of the range will be appropriate if there is whole person impairment for the injury of 8% and the injury is to the dominant hand.	
116.4	Minor injury to 1 or more of the fingers or the thumb	0 to 5
	Example of the injury	
	an uncomplicated fracture or soft tissue injury that has healed with minimal residual symptoms	

	Additional comment about appropriate level of ISV	
	• An ISV at or near the bottom of the range will be appropriate if there is a straightforward fracture of 1 or more of the fingers, with complete resolution within a short time.	
	• An ISV at or near the top of the range will be appropriate if there has been—	
	(a) a fracture causing minor angular or rotational malunion of the thumb, or index or middle finger, of the dominant hand; or	
	(b) some adherence of a tendon following surgical repair, limiting full function of the digit.	
117 Extreme hand injury	Comment	31 to 45
	• The injury will involve a severe traumatic injury to the hand, which may include amputation of part of the hand, causing gross impairment of the hand.	
	• A hand injury causing whole person impairment for the injury of 35% will generally fall within this item.	
	Examples of the injury	
	• an injury reducing a hand's capacity to 50% or less	

Page 120 2014 SL No. 129

	 an injury involving the amputation of several fingers that are rejoined to the hand leaving it clawed, clumsy and unsightly an amputation of some fingers and part of the palm causing grossly reduced grip and dexterity and gross disfigurement Additional comment about appropriate level of ISV 	
	 An ISV at or near the bottom of the range will be appropriate if the injured hand has some residual usefulness for performing activities of daily living. An ISV at or near the top of the range will be appropriate if the injured hand— (a) has little or no residual usefulness for performing activities of daily living; and (b) is the dominant hand. 	
118 Serious hand injury	Examples of the injury	16 to 30
	 a severe crush injury causing significantly impaired function despite surgery serious permanent tendon damage 	

Schedule 4

	Additional comment about appropriate level of ISV	
	An ISV at or near the top of the range will be appropriate if there is whole person impairment for the injury of 20%.	
119 Moderate hand injury		6 to 15
	Examples of the injury	
	a crush injury, penetrating wound or deep laceration, requiring surgery	
	• moderately serious tendon damage	
	• a hand injury causing whole person impairment for the injury of between 5% and 12%	
120 Minor hand injury		0 to 5
	Examples of the injury	
	a soft tissue injury, or an injury that does not require surgery, with nearly full recovery of hand function	
Division 8	Upper limb injuries, other to injuries mentioned in divising 7	
	Comment about appropriate level of ISV for items 121 to 124	
	An ISV at or near the top of the range will generally only be appropriate if the injury is to the dominant upper limb.	

Page 122 2014 SL No. 129

121 Extreme upper limb injury, other than an injury mentioned in divisions 3 to 7

36 to 65

Comment

The injury will involve an extremely serious upper limb injury, falling short of amputation, leaving the injured person little better off than if the whole arm had been lost.

Examples of the injury

- a serious brachial plexus injury affecting peripheral nerve function
- a non-union of a fracture, with peripheral nerve damage to the extent that an arm is nearly useless

Additional comment about appropriate level of ISV

- An ISV at or near the bottom of the range will be appropriate if there is whole person impairment for the injury of 31%.
- An ISV at or near the top of the range will be appropriate if—
 - (a) there is a complete brachial plexus lesion shown by a flail arm and paralysis of all muscles of the hand; and
 - (b) the injury is to the dominant limb.

	• An ISV at or near the top of the range will also be appropriate if there is a serious crush injury that causes whole person impairment for the injury of 55%.	
122 Serious upper limb injury, other than an injury mentioned in divisions 3 to 7		21 to 35
	Examples of the injury	
	 a serious fracture of the humerus, radius or ulna, or any combination of the humerus, radius and ulna, if there is significant permanent residual impairment of function a brachial plexus injury requiring nerve grafts with partial recovery of shoulder and elbow function and normal hand function Additional comment about appropriate level of ISV 	
	• An ISV at or near the bottom of the range will be appropriate if there is whole person impairment for the injury of 16%.	
	• An ISV at or near the top of the range will be appropriate if there is an injury to the dominant limb causing whole person impairment of 30%.	

Page 124 2014 SL No. 129

6 to 20

Examples of the injury

- a fracture that causes impairment of associated soft tissues, including nerves and blood vessels
- a fracture with delayed union or infection
- multiple fractures of the humerus, radius or ulna, or multiple fractures of any combination of the humerus, radius and ulna

Additional comment about appropriate level of ISV

- An ISV at or near the bottom of the range will be appropriate if there is whole person impairment for the injury of 6%
- An ISV in the lower half of the range will be appropriate if there is a complicated fracture of the humerus, radius or ulna, or any combination of the humerus, radius and ulna—
 - (a) requiring open reduction and internal fixation; and
 - (b) from which the injured person has recovered or is expected to recover.

	 An ISV at or near the top of the range will be appropriate if there is a crush injury causing significant skin or muscle loss with permanent residual impairment. An ISV at or near the top of the range will also be appropriate if there is whole person impairment for the injury of 15%. 	
124 Minor upper limb injury, other than an injury mentioned in divisions 3 to 7	Example of the injury an uncomplicated fracture of the humerus, radius or ulna, or any combination of the humerus, radius and ulna, from which the injured person has fully recovered within a short time Additional comment about appropriate level of ISV	0 to 5
	• An ISV at or near the bottom of the range will be appropriate if there are soft tissue injuries, lacerations, abrasions and contusions, from which the injured person will fully or almost fully recover.	

Page 126 2014 SL No. 129

	• An ISV at or near the top of the range will be appropriate if there is a brachial plexus injury from which the injured person has substantially recovered within a few weeks, leaving some minor functional impairment.	
Division 9	Pelvis or hip injuries	
	General comment for items 125 to 128	
	 The most serious injuries to the pelvis or hips can be as devastating as a leg amputation and will have similar ISVs. However, the appropriate ISV for other injuries to the pelvis or hips will generally be no higher than about 20. Examples of factors affecting ISV assessment for items 125 to 128 exceptionally severe specific sequelae will increase the level of ISV the availability of remedies, for 	
	example, a total hip replacement is an important factor in assessing an ISV	
105 5.4	• age	16 + 65
125 Extreme pelvis or hip injury		46 to 65
	Examples of the injury	
	• an extensive pelvis fracture	
	 degloving 	
	 permanent nerve palsies 	

		 Comment about appropriate level of ISV An ISV at or near the bottom of the range will be appropriate if there is whole person impairment for the injury of 40%. 	
		An ISV at or near the top of the range will be appropriate if the injured person is not able to mobilise without a wheelchair and is relatively young.	
126	Serious pelvis or hip injury		26 to 45
	,,	Comment	
		There will be substantial residual disability, for example, severe lack of bladder and bowel control, sexual dysfunction, or deformity making the use of 2 canes or crutches routine.	
		Examples of the injury	
		 a fracture dislocation of the pelvis involving both ischial and pubic rami traumatic myositis ossificans 	
		with formation of ectopic bone around the hip	
		a fracture of the acetabulum leading to degenerative changes and leg instability requiring an osteotomy, with the likelihood of future hip replacement surgery	

Page 128 2014 SL No. 129

	Comment about appropriate level of ISV	
	An ISV at or near the bottom of the	
	range will be appropriate for an	
	injury causing whole person	
	impairment for the injury of 20%.	
127 Moderate pelvis or hip injury		11 to 25
	Examples of the injury	
	a significant pelvis or hip injury, with no major permanent disability	
	• a hip fracture requiring a hip replacement	
	• a fracture of the sacrum extending into the sacro-iliac joint causing ongoing significant symptoms and whole person impairment of at least 10%	
	Comment about appropriate level of ISV	
	• An ISV at or near the bottom of the range will be appropriate if there is whole person impairment for the injury of 10%.	
	• An ISV at or near the top of the range will be appropriate if there is a fracture requiring a hip replacement that is only partially successful, so that there is a clear risk of the need for revision surgery.	

128 Minor pelvis or hip injury		0 to 10
	Examples of the injury	
	an uncomplicated fracture of 1 or more of the bones of the pelvis or hip that does not require surgery or cause permanent impairment	
	undisplaced coccygeal fractures	
	 undisplaced or healed pubic rami fractures 	
	• an injury to the coccyx, requiring surgery that is successful	
	Comment about appropriate level of ISV	
	• An ISV at or near the bottom of the range will be appropriate if there is a soft tissue injury from which the injured person fully recovers.	
	• An ISV at or near the middle of the range will be appropriate if there is whole person impairment for the injury of 5%.	
	• An ISV at or near the top of the range will be appropriate if the person has ongoing coccydynia and difficulties with sitting.	
Division 10	Amputation of lower limbs	
Subdivision 1	Amputation of both lower I	imbs
	Examples of factors affecting ISV assessment for items 129 and 130	
	• the level of each amputation	
	• severity of any phantom pain	

Page 130 2014 SL No. 129

		• pain in the stumps	
		 extent of any ongoing symptoms 	
129	Loss of both lower limbs above or through the knee		55 to 70
		Comment about appropriate level of ISV	
		An ISV at or near the top of the range will be appropriate if each amputation is near the hips so neither stump can be used with a prosthesis.	
130	Below the knee amputation of both lower limbs		50 to 65
		Comment about appropriate level of ISV	
		• An ISV at or near the bottom of the range will be appropriate if there is whole person impairment for the injury of 48%.	
		• An ISV at or near the top of the range will be appropriate if—	
		(a) both legs are amputated just below the knees leaving little or no stumps for use with prostheses; and	
		(b) there is poor quality skin cover; and	
		(c) there is a chronic regional pain syndrome.	

Sub	division 2	Amputation of 1 lower limb)
		Examples of factors affecting ISV assessment for items 131 and 132	
		• the level of the amputation	
		• severity of any phantom pain	
		• whether there have been problems with a prosthesis, for example, pain and further damage to the stump	
131	Above or through the knee amputation of 1 lower limb		35 to 50
		Comment about appropriate level of ISV	
		• An ISV at or near the bottom of the range will be appropriate if the amputation is through or just above the knee.	
		• An ISV at or near the top of the range will be appropriate if the amputation is near the hip and a prosthesis can not be used.	
132	Below the knee		31 to 45
	amputation of 1 lower limb		
		Comment about appropriate level of ISV	
		• An ISV at or near the bottom of the range will be appropriate in a straightforward case of a below-knee amputation with no complications.	

Page 132 2014 SL No. 129

Division 11	 An ISV at or near the top of the range will be appropriate if there is an amputation close to the knee joint, leaving little or no stump for use with a prosthesis. Lower limb injuries, other tinjuries mentioned in divis 10 or divisions 12 to 15 	ion 9 or
133 Extreme lower limb injury, other than an injury mentioned in division 9 or 10 or divisions 12 to 15	Comment	31 to 55
	These are the most severe injuries short of amputation, leaving the injured person little better off than if the whole leg had been lost. Examples of the injury • extensive degloving of the lower limb • an injury causing gross shortening of the lower limb • a fracture that has not united despite extensive bone grafting • serious neurovascular injury • a lower limb injury causing whole person impairment of 40%	

134 Serious lower limb injury, other than an injury mentioned in division 9 or 10 or divisions 12 to 15

21 to 30

Comment

- Removal of extensive muscle tissue and extensive scarring may have a significant enough impact to fall within this item.
- An injury to multiple joints or ligaments causing instability, prolonged treatment and a long period of non-weight-bearing may have a significant enough impact to fall within this item, but generally only if those results are combined.

Example of the injury

multiple complex fractures of the lower limb that are expected to take years to heal and cause serious deformity and serious limitation of mobility

Comment about appropriate level of ISV

 An ISV at or near the bottom of the range will be appropriate if there is whole person impairment for the injury of 16%.

Page 134 2014 SL No. 129

	• An ISV at or near the top of the range will be appropriate if there is whole person impairment for the injury of 25%.	
135 Moderate lower limb injury, other than an injury mentioned in division 9 or 10 or divisions 12 to 15		11 to 20
	Examples of the injury	
	 a fracture causing impairment of associated soft tissues, including nerves and blood vessels 	
	• a fracture with delayed union or infection	
	• multiple fractures of the femur, tibia or fibula, or multiple fractures of any combination of the femur, tibia and fibula	
	Examples of factors affecting ISV assessment	
	• period of non-weight-bearing	
	• presence or risk of degenerative change	
	• imperfect union of a fracture	
	 muscle wasting 	
	• limited joint movement	
	 unsightly scarring 	
	• permanently increased vulnerability to future damage	

	Comment about appropriate level of ISV	
	• An ISV at or near the bottom of the range will be appropriate if there is whole person impairment for the injury of 10%.	
	• An ISV at or near the middle of the range will be appropriate if there is a deep vein thrombosis requiring treatment for life.	
	• An ISV at or near the top of the range will be appropriate if there is whole person impairment for the injury of 15%.	
136 Minor lower limb injury, other than an injury mentioned in division 9 or 10 or divisions 12 to 15		0 to 10
	Example of the injury	
	an uncomplicated fracture of the femur, tibia or fibula, from which the injured person has fully recovered	
	Comment about appropriate level of ISV	
	• An ISV at or near the bottom of the range will be appropriate if there is a deep vein thrombosis requiring treatment for less than 6 months, from which the injured person will fully recover.	

Page 136 2014 SL No. 129

- An ISV at or near the bottom of the range will also be appropriate if—
 - (a) there are soft tissue injuries, lacerations, cuts, bruising or contusions, from which the injured person will fully or almost fully recover; and
 - (b) any residual disability will be minor.
- An ISV at or near the top of the range will be appropriate if there is a deep vein thrombosis requiring treatment for at least 1 year.
- An ISV at or near the top of the range will also be appropriate if the injured person is left with impaired mobility or a defective gait.
- An ISV at or near the top of the range will also be appropriate if there is whole person impairment for the injury of 9%.

Division 12 Knee injuries

General comment for items 137 to 140

The availability of remedies, for example, a total knee replacement, is an important factor in assessing an ISV under this division.

137	Extreme knee injury		25 to 40
		Example of the injury	
		a severe knee injury if there is a disruption of the joint, gross ligamentous damage, loss of function after unsuccessful surgery, lengthy treatment and considerable pain Comment about appropriate level of ISV	
		• An ISV at or near the bottom of the range will be appropriate if there is whole person impairment for the injury of 20%.	
		• An ISV at or near the top of the range will be appropriate if a total knee replacement was needed and—	
		(a) it is very likely that the knee replacement will need to be repeated; or	
		(b) there are ongoing severe symptoms, poor function and whole person impairment for the injury of more than 30%.	
138	Serious knee injury		11 to 24
		Comment	
		The injury may involve—	
		(a) ongoing pain, discomfort, limitation of movement, instability or deformity; and	

Page 138 2014 SL No. 129

	 (b) a risk, in the long-term, of degenerative changes caused by damage to the joint surfaces, muscular wasting or ligamentous or meniscal injury. Example of the injury 	
	a leg fracture extending into the knee joint, causing pain that is constant, permanent and limits movement or impairs agility Comment about appropriate level of ISV	
	An ISV at or near the middle of the range will be appropriate if there is a ligamentous injury, which required surgery and prolonged rehabilitation, causing whole person impairment of 15% and functional limitation.	
139 Moderate		6 to 10
knee injury	Examples of the injury	
	a dislocation or torn cartilage or meniscus causing ongoing minor instability, wasting and weakness Comment about appropriate level of ISV	
	An ISV at or near the top of the range will be appropriate if there is whole person impairment for the injury of 8%.	

140 Minor knee injury		0 to 5
	Examples of the injury	
	• a partial cartilage, meniscal or ligamentous tear	
	• a laceration	
	• a twisting or bruising injury	
Division 13	Ankle injuries	
	Comment about appropriate level of ISV for items 141 to 144	
	The appropriate ISV for the vast majority of ankle injuries is 1 or 2.	
141 Extreme ankle injury		21 to 35
	Examples of the injury	
	• a transmalleolar fracture of the ankle with extensive soft tissue damage causing 1 or more of the following—	
	(a) severe deformity with varus or valgus malalignment;	
	(b) a risk that any future injury to the relevant leg may lead to a below-knee amputation of the leg;	
	(c) marked reduction in walking ability with constant dependence on walking aids;	
	(d) inability to place the relevant foot for even load-bearing distribution.	

Page 140 2014 SL No. 129

	an ankylosed ankle in a severely misaligned position with severe ongoing pain and other debilitating complications	
	• whole person impairment for the injury of more than 20%	
	Examples of factors affecting ISV assessment	
	a failed arthrodesis	
	 regular disturbance of sleep 	
	need for an orthosis for load bearing and walking	
142 Serious ankle injury		11 to 20
	Example of the injury	
	an injury requiring a long period of treatment, a long time in plaster or insertion of pins and plates, if—	
	(a) there is permanent significant ankle instability; or	
	(b) the ability to walk is severely limited on a permanent basis	
	Examples of factors affecting ISV assessment	
	unsightly scarring	
	• the significance of any malunion	
	a requirement for modified footwear	
	• whether, and to what degree, there is swelling following activity	

		 Additional comment about appropriate level of ISV An ISV at or near the bottom of the range will be appropriate if there is whole person impairment for the injury of 10%. An ISV at or near the top of the range will be appropriate if a major tendon controlling foot or ankle movement is severed. 	
143	Moderate ankle injury	Examples of the injury	6 to 10
		a fracture, ligamentous tear or similar injury causing moderate disability, for example—	
		• difficulty in walking on uneven ground	
		 awkwardness on stairs 	
		• irritation from metal plates	
		 residual scarring 	
		Additional comment about appropriate level of ISV	
		An ISV at or near the bottom of the range will be appropriate if there is whole person impairment for the injury of 6%.	
144	Minor ankle injury		0 to 5
	· , · ,	Examples of the injury	
		a sprain, ligamentous or soft tissue injury or minor or undisplaced fracture	

Page 142 2014 SL No. 129

	 Examples of factors affecting ISV assessment whether the injured person has fully recovered from the injury, and if not, whether there is any tendency for the ankle to give way whether there is scarring, aching or discomfort 	
Division 14	Foot injuries	
Subdivision 1	Amputations	
145 Amputation of both feet		32 to 65
	Examples of factors affecting ISV assessment	
	severity of any phantom pain	
	• pain in the stumps	
	• extent of any ongoing symptoms	
	Comment about appropriate level of ISV	
	• An ISV at or near the bottom of the range will be appropriate if there are amputations of both feet at the forefoot (transmetatarsal level amputations).	

	 An ISV of about 40 will be appropriate if there are amputations of both feet at the mid foot (tarsometatarsal level or Lisfranc amputations). An ISV at or near the top of the range will be appropriate if each amputation is at the level of the ankle (Syme's amputation) and the stumps can not be used with prostheses. 	
146 Amputation of 1 foot	 Examples of factors affecting ISV assessment severity of any phantom pain pain in the stump extent of any ongoing symptoms Comment about appropriate level of ISV An ISV at or near the bottom of the range will be appropriate if the amputation is at the forefoot (transmetatarsal level amputation). An ISV of about 26 will be appropriate if the amputation is at the mid foot (tarsometatarsal level or Lisfranc amputation). An ISV at or near the top of the range will be appropriate if the 	20 to 35
	range will be appropriate if the amputation is at the level of the ankle (Syme's amputation) and the stump can not be used with a prosthesis.	

Page 144 2014 SL No. 129

Subdivision 2		Other foot injuries	
147	Extreme foot injury that is not an amputation		13 to 25
		Comment	
		There will be permanent and severe pain or very serious permanent disability.	
		Example of the injury	
		an unusually severe foot injury causing whole person impairment of 15% or more, for example, a heel fusion or loss of the tibia-calcaneum angle Comment about appropriate level of ISV	
		An ISV at or near the top of the range will be appropriate if there is subtalar fibrous ankylosis in a severely malaligned position, ongoing pain and whole person impairment for the injury of 24%.	
148	Serious foot injury		9 to 12
	iiijui y	Examples of the injury	
		 a severe midfoot deformity causing whole person impairment of 8% a lower level loss of the tibia-calcaneum angle 	

149 Moderate foot injury		4 to 8
	Example of the injury	
	a displaced metatarsal fracture causing permanent deformity, with ongoing symptoms of minor severity, for example, a limp that does not prevent the injured person engaging in most daily activities	
150 Minor foot injury		0 to 3
	Examples of the injury	
	a simple metatarsal fracture, ruptured ligament, puncture wound or similar injury	
	Comment about appropriate level of ISV	
	An ISV of 2 or less will be appropriate if there is a straightforward foot injury, for example, a fracture, laceration or contusions, from which the injured person will fully recover.	
Division 15	Toe injuries	
151 Extreme toe injury		
	Examples of factors affecting ISV assessment for items 151.1 to 151.3	
	• whether the amputation was traumatic or surgical	
	• extent of the loss of the forefoot	
	 residual effects on mobility 	

Page 146 2014 SL No. 129

151.1	Amputation of all toes	8 to 20
	Comment about appropriate level of ISV	
	• An ISV at or near the middle of the range will be appropriate if the amputation is through the metatarsophalangeal joints (MTP joints) of all toes.	
	• An ISV at or near the top of the range will be appropriate if there is complete amputation of all toes and amputation of a substantial part of the forefoot.	
151.2	Amputation of the great toe	6 to 12
	Example of factor affecting ISV assessment for item 151.2	
	the level at which the amputation happens or any ongoing symptoms	
	Comment about appropriate level of ISV	
	An ISV at or near the top of the range will be appropriate if there is complete loss of the great toe and ball of the foot caused by an amputation through the first metatarsal bone.	
151.3	Amputation of individual lesser toes	3 to 5
	Example of factor affecting ISV assessment for item 151.3	
	the level at which the amputation happens or any ongoing symptoms	

		Comment about appropriate level of ISV	
		• An ISV at or near the bottom of the range will be appropriate if there is an amputation of 1 lesser toe and—	
		(a) there is no ongoing pain; and	
		(b) there is little or no loss of function of the foot; and	
		(c) the cosmetic effect of the amputation is minor.	
		• An ISV at or near the top of the range will be appropriate if there is complete amputation of all lesser toes and part of the forefoot.	
152	Serious toe injury		8 to 12
	,,	Comment	
		The injury will cause serious and permanent disability.	
		Examples of the injury	
		a severe crush injury causing ankylosis of the toes	
		• a bursting wound, or an injury causing severe toe damage, with significant symptoms	
153	Moderate toe injury		4 to 7
	,,	Comment	
		Comment	I

Page 148 2014 SL No. 129

	Examples of the injury	
	a moderate injury to the great toe	
	• a crush injury causing multiple fractures of 2 or more toes	
	Comment about appropriate level of ISV	
	An ISV at or near the top of the range will be appropriate if there has been more than 1 unsuccessful operation, or there are persisting stabbing pains, impaired gait or similar effects.	
154 Minor toe injury		0 to 3
	Examples of the injury	
	a relatively straightforward fracture or soft tissue injury	
	Comment about appropriate level of ISV	
	An ISV of 1 will be appropriate if there is a straightforward fracture of 1 or more toes with complete resolution within a short time.	
Division 16	Limb disorders	
	General comment	
	The ISV for a limb disorder must be assessed having regard to the item of this schedule that—	
	(a) relates to the part of the body affected by the disorder; and	
	(b) is for an injury that has a similar level of adverse impact to the disorder.	

Examples of a limb disorder

- tenosynovitis (inflammation of synovial sheaths of tendons usually resolving with rest over a short period and sometimes leading to ongoing symptoms of loss of grip and dexterity)
- peripheral nerve injury (the constriction of the motor or sensory nerves or thickening of surrounding tissue, for example, carpal tunnel syndrome or sciatica)
- epicondylitis (inflammation around the elbow joint, for example, medially (golfer's elbow) or laterally (tennis elbow))
- vascular disorders, for example, deep vein thrombosis

Examples of factors affecting ISV assessment

- whether the disorder is bilateral or one sided
- the level of pain, swelling, tenderness or crepitus or other symptoms
- the capacity to avoid a recurrence of symptoms
- the ability to engage in daily activities
- the availability and likely benefit of surgery
- whether the disorder is to a dominant or non-dominant limb

Page 150 2014 SL No. 129

Part 7

Scarring to parts of the body other than the face

General comment

- This part applies to external appearance and physical condition of the skin only, and includes scarring to the scalp, trunk and limbs.
- Facial scarring must be assessed under part 3, division 2.
- This part does not apply to adhesions, or scarring, of internal organs.
- This part will usually apply to an injury involving skeletal damage only if the skeletal damage is minor.
- Many of the physical injuries mentioned in this schedule involve some scarring from the initial injury and subsequent surgery, including skin grafting, to repair the injury and this has been taken into account in fixing the range of ISVs for the injuries.

Example—

The ISV range for an injury causing a closed fracture of a limb takes into account the potential need for open reduction and internal fixation of the fracture and the resulting surgical wound and scar.

Examples of factors affecting ISV assessment for items 155.1 to 155.4

- location of a scar
- age

Schedule 4

	 adverse psychological reaction 	
	• likelihood of a scar fading or becoming less noticeable over time	
155 Scarring to a part of the body other than the face		
155.1	Extreme scarring to a part of the body other than the face	14 to 25
	Comment about appropriate level of ISV	
	• An ISV at or near the bottom of the range will be appropriate if there is—	
	(a) extensive scarring to 1 or more of the limbs and significant cosmetic disfigurement; and	
	(b) either—	
	(i) the need to keep the limb or limbs covered or wear special clothing; or	
	(ii) ongoing limitation in the ability to participate in activities because of cosmetic disfigurement or functional impairment.	
	• An ISV at or near the top of the range will be appropriate if there is gross permanent scarring over an extensive area or areas of the body, with ongoing pain and other symptoms.	

Page 152 2014 SL No. 129

155.2	Serious scarring to a part of the body other than the face Comment	9 to 13
	There is serious scarring— (a) requiring extensive medical treatment or surgery; and (b) causing significant ongoing limitation in the ability to participate in activities because of cosmetic disfigurement or functional impairment.	
	Examples of the injury	
	• significant scarring over the upper and lower arm requiring skin grafting if—	
	(a) there are post-operative complications requiring additional medical treatment for up to 18 months; and	
	(b) there is maximum medical improvement within 2 years after the scarring is caused.	
	• hypertrophic (keloid) scarring caused by a burn to the front of the neck, with an intermittent sensation of burning, itching or irritation.	
155.3	4 to 8	
	body other than the face Examples of the injury	
	several noticeable scars that are hypertrophic (keloid)	

	 a significant linear scar in an area of cosmetic importance, for example, the front of the neck 	
155.4	Minor scarring to a part of the body other than the face	0 to 3
	Examples of the injury	
	• scarring caused by a superficial burn that heals within a few weeks and causes some minor change of pigmentation in a noticeable area.	
	• a single noticeable scar, or several superficial scars, to 1 or both of the legs, arms or hands, with some minor cosmetic damage.	
Part 8	Burn injuries	
	General comment	
	• The ISV for a burn injury must be assessed having regard to the item of this schedule that—	
	(a) relates to the part of the body affected by the burn injury; and	
	(b) is for an injury that has a similar level of adverse impact to the burn injury.	
	• Burns to the face must be assessed under part 3, division 2.	
	• In burns cases, the ISV for an injury to a part of the body causing functional impairment will generally be at or near the top of the range for an injury to that part of the body.	

Page 154 2014 SL No. 129

Par		In serious burns cases, the effects of scarring are more comprehensive and less able to be remedied than the effects of scarring from other causes. Injuries affecting hair	
156	Extreme injury affecting head hair	Example of the injury	11 to 15
157	Serious injury	total permanent loss of head hair	4 to 10
	affecting head hair		
		Example of the injury	
		damage to head hair, caused by, for example, defective waving or tinting, if— (a) the physical effect of the	
		damage is— (i) dermatitis; or	
		(ii) tingling or burning of the scalp, causing dry, brittle hair that breaks off or falls out, or both; and	
		(b) the physical effect leads to depression, loss of confidence and inhibited social life	
		Comment about appropriate level of ISV	
		An ISV in the upper half of the range will be appropriate if—	
		(a) thinning continues and prospects of regrowth are poor; or	

Schedule 4

	(b) there is a partial loss of areas of hair and regrowth is slow.		
158 Moderate injury affecting head hair or loss of body hair		0 to 3	
	Examples of the injury		
	 hair that has been pulled out leaving bald patches 		
	• the same example applies as for item 157 but with fewer or only moderate symptoms		
	Example of factor affecting ISV assessment		
	length of time before regrowth		
Part 10	Dermatitis		
159 Extreme dermatitis		11 to 20	
	Examples of the injury		
	permanent dermatitis having a severe effect on employment and domestic capability, with some mental disorder		
160 Serious dermatitis		8 to 10	
dormanio	Example of the injury		
	dermatitis that—		
	(a) lasts for years or indefinitely; and		
	(b) involves cracking and soreness; and		
	(c) affects employment and domestic capability; and		

Page 156 2014 SL No. 129

Schedule 4

		(d) causes marked adverse psychological reaction	
161	Moderate dermatitis		3 to 7
		Example of the injury	
		dermatitis lasting for a significant period, but settling with treatment or a change of personal conduct, or both	
162	Minor dermatitis		0 to 2
		Examples of the injury	
		itching, skin irritation or a rash, alone or in combination, that resolves with treatment within a few months of the start of treatment	

Schedule 5 Matters relevant to PIRS assessment by medical expert

section 7(1)

Part 1 Explanation of the PIRS

1 PIRS rates permanent impairment caused by mental disorder

The PIRS set out in schedule 6 rates permanent impairment caused by a mental disorder.

Note-

PIRS ratings are referred to in schedule 4, part 2. A PIRS rating is capable of being accepted by a court under schedule 3, section 6 only if it is—

- (a) assessed by a medical expert as required under this schedule and schedule 6; and
- (b) provided to the court in a PIRS report as required under section 12.

2 Areas of functional impairment

- (1) The PIRS consists of 6 scales, each of which rates permanent impairment in an area of function.
- (2) Each scale has 5 classes of impairment, ranging from little or no impairment to total impairment.

Page 158 2014 SL No. 129

Part 2 Assessment of PIRS rating

3 Medical expert must comply with requirements

- (1) A medical expert must comply with this schedule and schedule 6 in assessing a PIRS rating for a mental disorder of an injured person.
- (2) The medical expert may give an assessment only if the medical expert has examined the injured person.

4 How to assess a PIRS rating

(1) To assess a PIRS rating for a mental disorder of an injured person, a medical expert must follow the steps set out in this section.

Note-

Section 8 provides an example completed worksheet that could be used to assess a PIRS rating.

- (2) Step 1—for each area of functional impairment set out in the PIRS, the medical expert must—
 - (a) decide which level of impairment set out in the PIRS describes the level of impairment caused by the mental disorder of the injured person; and
 - (b) read off from the PIRS the class (for example, class 1) that corresponds to the level that has been decided.
- (3) In deciding which level to choose for an area of functional impairment, the medical expert—
 - (a) must have regard to—
 - (i) the examples of indicators of the level of impairment set out in the PIRS for the area to the extent they are relevant in a particular case; and
 - (ii) all factors the medical expert considers relevant to the injured person's level of impairment, including, for example, the injured person's age and pre-existing functional capacity for the area; and

(b) may have regard to the range of percentages of impairment set out in the PIRS for the area as a guide to the level of impairment.

Note—

The examples of impairment set out in the PIRS assume a full pre-existing functional capacity for the area which may not be appropriate in a particular case.

- (4) Step 2—the medical expert must list the class number of the 6 classes read off under step 1 in ascending order.
- (5) Step 3—the medical expert must work out the median of the class numbers (the *median class score*) under section 6.
- (6) Step 4—the medical expert must work out the total of the class numbers (the *total class score*) by adding together all of the class numbers.
- (7) Step 5—from the conversion table in section 7, the medical expert must read off the percentage impairment that corresponds to the particular median class score when found in conjunction with the particular total class score.
- (8) Subject to section 5, the percentage impairment is the PIRS rating assessed by the medical expert for the mental disorder of the injured person.

5 Assessment if pre-existing mental disorder

- (1) If an injured person has a pre-existing mental disorder, a medical expert must—
 - (a) work out a percentage impairment for the pre-existing mental disorder at the time immediately before the injury using the steps set out in section 4 (the *pre-injury rating*); and
 - (b) work out a percentage impairment for the current mental disorder using the steps set out in section 4 (the *post-injury rating*); and
 - (c) subtract the pre-injury rating from the post-injury rating.

Page 160 2014 SL No. 129

(2) The remaining percentage impairment is the PIRS rating assessed by the medical expert for the mental disorder of the injured person.

Editor's note—

See also section 11 (Pre-existing mental disorder).

6 How to work out a median class score

- (1) A median class score is the number that would fall at the middle point between the third class number and the fourth class number if all the class numbers are listed in ascending order.
- (2) If the median class score under subsection (1) is not a whole number, the median class score must be rounded up to the nearest whole number.

7 Conversion table

This section sets out the conversion table for use under section 4.

Conversion table for percentage impairment

Median class score

	1	2	3	4	5
6	0%				
7	0%				
8	1%				
9	1%	4%			
10	2%	5%			
11	2%	5%			
12	2%	6%			
13	3%	7%	11%		
14	3%	7%	13%		
15		8%	15%		
16		9%	17%		
17		9%	19%	31%	
18		10%	22%	34%	
19			24%	37%	
20			26%	41%	
21			28%	44%	61%
22			30%	47%	65%
23				50%	70%
24				54%	74%
25				57%	78%
26				60%	83%
27					87%
28					91%
29					96%
30					100%

Page 162 2014 SL No. 129

8 Example worksheet

This section sets out an example of a completed worksheet that could be used to assess a PIRS rating for a mental disorder.

Area of functional impairment			Clas	ss	
1 Self-care and personal hygiene	1				
2 Social and recreational activities		2			
3 Travel			3		
4 Social functioning					5
5 Concentration, persistence and pace					5
6 Adaptation					5
List of class numbers in	I.	1			
ascending order: 1	2	3	5	5	5
Median class score (using section 6):					
Total class score:					
Percentage impairment (using conversion table in section 7):					
PIRS rating (if no pre-existing me	ntal diso	rder):			44%

Part 3 Particular cases

9 Refusal of treatment

- (1) This section applies if an injured person refuses treatment that could lead to a significant improvement in the level of permanent impairment caused by a mental disorder of the injured person.
- (2) Despite the injured person's refusal of treatment, a medical expert may assess a PIRS rating for the mental disorder of the injured person.

- (3) The refusal of treatment must not affect the medical expert's assessment of the PIRS rating.
- (4) The medical expert must note the refusal of treatment in the PIRS report and state in the report the likely effect of treatment and any reasons known to the medical expert for the refusal of treatment.
- (5) Subsection (6) applies if a PIRS report given to a court states that the injured person refuses treatment that could lead to a significant improvement in the level of permanent impairment caused by the mental disorder of the injured person.
- (6) The court may, in assessing the ISV for an injury or multiple injuries of the injured person, take into account the refusal of treatment and the matters stated in the PIRS report under subsection (4).
- (7) In this section—

PIRS report means a report under section 12.

10 Cognitive impairment

If a medical expert assessing a PIRS rating for a mental disorder of an injured person suspects the injured person has a cognitive impairment, the medical expert must take into account the following factors—

- (a) the relevant medical history of the injured person;
- (b) any medical treatment, and progress towards rehabilitation, for the cognitive impairment;
- (c) any results of radiological scans, including CT and MRI scans, electroencephalograms and psychometric tests made available to the medical expert.

11 Pre-existing mental disorder

If a medical expert assessing a PIRS rating for a mental disorder of an injured person considers the injured person had a pre-existing mental disorder, the medical expert must—

Page 164 2014 SL No. 129

- (a) make appropriate enquiry into the pre-existing mental disorder; and
- (b) consider any psychiatric or psychological reports made available to the medical expert.

Part 4 Report of PIRS rating

12 Court to be given PIRS report

- (1) This section applies if a party to a proceeding wants a court to accept a PIRS rating assessed by a medical expert for a mental disorder of an injured person.
- (2) The party must give the court a written report from the medical expert stating the following matters—
 - (a) the mental disorder diagnosed by the medical expert;
 - (b) the PIRS rating assessed by the medical expert for the mental disorder of the injured person;
 - (c) how the PIRS rating is assessed, including—
 - (i) for each area of functional impairment set out in the PIRS—
 - (A) the relevant clinical findings; and
 - (B) the level of impairment set out in the PIRS that the medical expert decided described the level of impairment caused by the mental disorder of the injured person; and
 - (C) the class set out in the PIRS that corresponds to the level that was decided; and
 - (ii) the median class score and total class score worked out under section 4; and
 - (iii) if the injured person had a pre-existing mental disorder, the information mentioned in subparagraphs (i) and (ii) in relation to the

pre-injury rating and the post-injury rating as defined under section 5;

(d) details of any cognitive impairment of the injured person.

Page 166 2014 SL No. 129

Schedule 6 Psychiatric impairment rating scale

section 7(1)

Area of functional impairment: self-care and personal hygiene

Class	Level of impairment	Examples of indicators of level of impairment Note—These examples must be had regard to under schedule 5, section 4(3)(a)(i).	Percentage impairment ranges Note— These ranges may be had regard to under schedule 5, section 4(3)(b).
Class 1	Little or no impairment		0 to 3%
Class 2	Mild impairment	 can live independently looks after himself or herself adequately, although may look unkempt occasionally sometimes misses a meal or relies on takeaway food 	4 to 10%
Class 3	Moderate impairment	 can not live independently without regular support needs prompting to shower daily and wear clean clothes does not prepare own meals 	11 to 30%

Schedule 6

		 frequently misses meals if living independently, a family member or community nurse visits, or needs to visit, 2 to 3 times a week to ensure a minimum level of hygiene and nutrition 	
Class 4	Severe impairment	 needs supervised residential care if unsupervised, may accidentally or deliberately hurt himself or herself 	31 to 60%
Class 5	Totally impaired	needs assistance with basic functions, for example, feeding or toileting	more than 60%

Page 168 2014 SL No. 129

Area of functional impairment: social and recreational activities

Class	Level of impairment	Examples of indicators of level of impairment Note—These examples must be had regard to under schedule 5, section 4(3)(a)(i).	Percentage impairment ranges Note— These ranges may be had regard to under schedule 5, section 4(3)(b).
Class 1	Little or no impairment	 regularly goes to cinemas, restaurants or other recreational venues 	0 to 3%
		 belongs to clubs or associations and is actively involved in them 	
Class 2	Mild impairment	occasionally goes to social events without needing a support person, but does not become actively involved, for example, by dancing or cheering a team	4 to 10%
Class 3	Moderate impairment	 rarely goes to social events, and usually only when prompted by family or a friend does not become involved in social events will not go out without a support person 	11 to 30%

Schedule 6

		 remains quiet and withdrawn 	
Class 4	Severe impairment		31 to 60%
		never leaves own residence	
		• tolerates the company of a family member or close friend	
		will go to a different room or garden when a person, other than a family member or close friend, comes to visit someone at own residence	
Class 5	Totally impaired		more than 60%
		• can not tolerate living with anybody	
		extremely uncomfortable when visited by a close family member	

Area of functional impairment: travel

Class	Level of impairment	Examples of indicators of level of impairment Note—These examples must be had regard to under schedule 5, section 4(3)(a)(i).	Percentage impairment ranges Note— These ranges may be had regard to under
			schedule 5, section 4(3)(b).
Class 1	Little or no impairment		0 to 3%

Page 170 2014 SL No. 129

	I		I
		 can travel to new environments without supervision 	
Class 2	Mild impairment		4 to 10%
		• can travel without a support person, but only in a familiar area, for example, to go to the local shops or visit a neighbour	
Class 3	Moderate impairment		11 to 30%
	1	can not travel away from own residence without a support person	
		• there may be problems resulting from excessive anxiety or cognitive impairment	
Class 4	Severe impairment		31 to 60%
		finds it extremely uncomfortable to leave own residence even with a trusted person	
Class 5	Totally impaired		more than 60%
		• can not be left unsupervised, even at own residence	
		• may require 2 or more persons to supervise him or her when travelling	

Area of functional impairment: social functioning

Class	Level of impairment	Examples of indicators of level of impairment	Percentage impairment ranges
		Note—These examples must be had regard to under schedule 5, section 4(3)(a)(i).	Note— These ranges may be had regard to under schedule 5, section 4(3)(b).
Class 1	Little or no impairment		0 to 3%
		has no difficulty in forming and sustaining relationships, for example, with a spouse or close friend lasting years	
Class 2	Mild impairment		4 to 10%
		existing relationships are strained	
		tension and arguments between the injured person and a spouse or close family member	
		• some friendships are lost	

Page 172 2014 SL No. 129

Cl. 2	M - 1		11 4- 200
Class 3	Moderate impairment		11 to 30%
	ппрапшеш	• established relationships are severely strained, as is shown by periods of separation or domestic violence	
		 if the injured person has children, then a spouse, family members or community services are providing most of the care for the children 	
Class 4	Severe		31 to 60%
	impairment		
		• can not form or sustain long-term relationships	
		 pre-existing relationships, for example, with a spouse or close friend, have ended 	
		• can not care for dependents, for example, child dependents (if any) or an elderly parent	
Class 5	Totally impaired		more than 60%
		 can not function within society 	
		• lives away from populated areas	
		 actively avoids social contact 	

Area of functional impairment: concentration, persistence and pace

Class	Level of impairment	Examples of indicators of level of impairment Note—These examples must be had	Percentage impairment ranges
		regard to under schedule 5, section 4(3)(a)(i).	Note— These ranges may be had regard to under schedule 5, section 4(3)(b).
Class 1	Little or no impairment		0 to 3%
	•	can complete vocational education and training or a university course within a normal time frame	
Class 2	Mild impairment		4 to 10%
		can undertake a basic or standard retraining course at a slower pace	
		• can focus on intellectually demanding tasks for up to 30 minutes, then may feel fatigued or develop headaches	

Page 174 2014 SL No. 129

GI 0	3.5.1		11 200
Class 3	Moderate		11 to 30%
	impairment		
		• can not read more than	
		newspaper articles	
		• finds it difficult to follow	
		complex instructions, for	
		example, operating manuals or building plans	
		• can not make significant	
		repairs to motor vehicle or	
		type long documents	
		• can not follow a pattern for	
		making clothes or tapestry	
		or knitting	
Class 4	Severe		31 to 60%
	impairment		
		• able only to read a few lines before losing concentration	
		• has difficulty in following simple instructions	
		• impaired concentration is	
		obvious even during brief conversation	
		• can not live alone or needs	
		regular assistance from	
		family members or	
		community services	
Class 5	Totally		more than
	impaired		60%
		needs constant supervision	
		and assistance within an institutional environment	
		institutional chymolillent	

Area of functional impairment: adaptation

Note—

This area of functional impairment deals with employability.

Class	Level of impairment	Examples of indicators of level of impairment Note—These examples must be had regard to under schedule 5, section 4(3)(a)(i).	Percentage impairment ranges Note— These ranges may be had regard to under schedule 5, section 4(3)(b).
Class 1	Little or no impairment		0 to 3%
		• can work full-time in the position in which the injured person worked immediately before the injury (the <i>pre-injury position</i>)	
		the injured person's duties at work and performance of the duties are consistent with the person's education and training	
		• can cope with the normal demands of the job	

Page 176 2014 SL No. 129

Class 2	Mild		4 to 10%
	impairment		
		• can work in the pre-injury position, but for no more	
		than 20 hours a week, for	
		example, because the injured person is no longer	
		happy to work with	
		particular persons	
		• can work full-time in a different position where	
		performance of the relevant	
		duties requires the use of comparable skill and	
		intellect to that required to	
		perform the duties of the pre-injury position	
Class 3	Moderate	2 0 0 2	11 to 30%
	impairment		
		• can not work at all in the pre-injury position	
		• only able to work less than	
		20 hours a week in a different position where	
		performance of the relevant	
		duties requires less skill or is otherwise less	
		demanding, for example,	
		less stressful	
Class 4	Severe impairment		31 to 60%
	impuliment	• can not work more than 1 or	
		2 days at a time	
		works less than 20 hours a fortnight	
		• the pace at which work is done is reduced	

Schedule 6

		attendance at work is erratic		
Class 5	Totally impaired	needs constant supervision and assistance within an	more 60%	than
		institutional environment		

Page 178 2014 SL No. 129

Schedule 7 General damages calculation provisions

section 8

1 General damages calculation provisions—2 December 2002 to 30 June 2010

The general damages must be calculated for an injury arising on or after 2 December 2002 to and including 30 June 2010 as follows—

- (a) if the injury scale value of the injury is assessed as 5 or less—by multiplying the injury scale value by \$1000;
- (b) if the injury scale value of the injury is assessed as 10 or less but more than 5—by adding to \$5000 an amount calculated by multiplying the number by which the injury scale value exceeds 5 by \$1200;
- (c) if the injury scale value of the injury is assessed as 15 or less but more than 10—by adding to \$11000 an amount calculated by multiplying the number by which the injury scale value exceeds 10 by \$1400;
- (d) if the injury scale value of the injury is assessed as 20 or less but more than 15—by adding to \$18000 an amount calculated by multiplying the number by which the injury scale value exceeds 15 by \$1600;
- (e) if the injury scale value of the injury is assessed as 25 or less but more than 20—by adding to \$26000 an amount calculated by multiplying the number by which the injury scale value exceeds 20 by \$1800;
- (f) if the injury scale value of the injury is assessed as 30 or less but more than 25—by adding to \$35000 an amount calculated by multiplying the number by which the injury scale value exceeds 25 by \$2000;
- (g) if the injury scale value of the injury is assessed as 35 or less but more than 30—by adding to \$45000 an amount

- calculated by multiplying the number by which the injury scale value exceeds 30 by \$2200;
- (h) if the injury scale value of the injury is assessed as 40 or less but more than 35—by adding to \$56000 an amount calculated by multiplying the number by which the injury scale value exceeds 35 by \$2400;
- (i) if the injury scale value of the injury is assessed as 50 or less but more than 40—by adding to \$68000 an amount calculated by multiplying the number by which the injury scale value exceeds 40 by \$2580;
- (j) if the injury scale value of the injury is assessed as 60 or less but more than 50—by adding to \$93800 an amount calculated by multiplying the number by which the injury scale value exceeds 50 by \$2760;
- (k) if the injury scale value of the injury is assessed as 70 or less but more than 60—by adding to \$121400 an amount calculated by multiplying the number by which the injury scale value exceeds 60 by \$2940;
- (1) if the injury scale value of the injury is assessed as 80 or less but more than 70—by adding to \$150800 an amount calculated by multiplying the number by which the injury scale value exceeds 70 by \$3120;
- (m) if the injury scale value of the injury is assessed as 90 or less but more than 80—by adding to \$182000 an amount calculated by multiplying the number by which the injury scale value exceeds 80 by \$3300;
- (n) if the injury scale value of the injury is assessed as 100 or less but more than 90—by adding to \$215000 an amount calculated by multiplying the number by which the injury scale value exceeds 90 by \$3500.

2 General damages calculation provisions—1 July 2010 to 30 June 2011

The general damages must be calculated for an injury arising on or after 1 July 2010 to and including 30 June 2011 as follows—

Page 180 2014 SL No. 129

- (a) if the injury scale value of the injury is assessed as 5 or less—by multiplying the injury scale value by \$1180;
- (b) if the injury scale value of the injury is assessed as 10 or less but more than 5—by adding to \$5900 an amount calculated by multiplying the number by which the injury scale value exceeds 5 by \$1410;
- (c) if the injury scale value of the injury is assessed as 15 or less but more than 10—by adding to \$12950 an amount calculated by multiplying the number by which the injury scale value exceeds 10 by \$1650;
- (d) if the injury scale value of the injury is assessed as 20 or less but more than 15—by adding to \$21200 an amount calculated by multiplying the number by which the injury scale value exceeds 15 by \$1880;
- (e) if the injury scale value of the injury is assessed as 25 or less but more than 20—by adding to \$30600 an amount calculated by multiplying the number by which the injury scale value exceeds 20 by \$2120;
- (f) if the injury scale value of the injury is assessed as 30 or less but more than 25—by adding to \$41200 an amount calculated by multiplying the number by which the injury scale value exceeds 25 by \$2360;
- (g) if the injury scale value of the injury is assessed as 35 or less but more than 30—by adding to \$53000 an amount calculated by multiplying the number by which the injury scale value exceeds 30 by \$2590;
- (h) if the injury scale value of the injury is assessed as 40 or less but more than 35—by adding to \$65950 an amount calculated by multiplying the number by which the injury scale value exceeds 35 by \$2830;
- (i) if the injury scale value of the injury is assessed as 50 or less but more than 40—by adding to \$80100 an amount calculated by multiplying the number by which the injury scale value exceeds 40 by \$3040;
- (j) if the injury scale value of the injury is assessed as 60 or less but more than 50—by adding to \$110500 an amount

- calculated by multiplying the number by which the injury scale value exceeds 50 by \$3250;
- (k) if the injury scale value of the injury is assessed as 70 or less but more than 60—by adding to \$143000 an amount calculated by multiplying the number by which the injury scale value exceeds 60 by \$3460;
- (1) if the injury scale value of the injury is assessed as 80 or less but more than 70—by adding to \$177600 an amount calculated by multiplying the number by which the injury scale value exceeds 70 by \$3680;
- (m) if the injury scale value of the injury is assessed as 90 or less but more than 80—by adding to \$214400 an amount calculated by multiplying the number by which the injury scale value exceeds 80 by \$3890;
- (n) if the injury scale value of the injury is assessed as 100 or less but more than 90—by adding to \$253300 an amount calculated by multiplying the number by which the injury scale value exceeds 90 by \$4120.

3 General damages calculation provisions—1 July 2011 to 30 June 2012

The general damages must be calculated for an injury arising on or after 1 July 2011 to and including 30 June 2012 as follows—

- (a) if the injury scale value of the injury is assessed as 5 or less—by multiplying the injury scale value by \$1220;
- (b) if the injury scale value of the injury is assessed as 10 or less but more than 5—by adding to \$6100 an amount calculated by multiplying the number by which the injury scale value exceeds 5 by \$1450;
- (c) if the injury scale value of the injury is assessed as 15 or less but more than 10—by adding to \$13350 an amount calculated by multiplying the number by which the injury scale value exceeds 10 by \$1700;
- (d) if the injury scale value of the injury is assessed as 20 or less but more than 15—by adding to \$21850 an amount

Page 182 2014 SL No. 129

- calculated by multiplying the number by which the injury scale value exceeds 15 by \$1940;
- (e) if the injury scale value of the injury is assessed as 25 or less but more than 20—by adding to \$31550 an amount calculated by multiplying the number by which the injury scale value exceeds 20 by \$2180;
- (f) if the injury scale value of the injury is assessed as 30 or less but more than 25—by adding to \$42450 an amount calculated by multiplying the number by which the injury scale value exceeds 25 by \$2430;
- (g) if the injury scale value of the injury is assessed as 35 or less but more than 30—by adding to \$54600 an amount calculated by multiplying the number by which the injury scale value exceeds 30 by \$2670;
- (h) if the injury scale value of the injury is assessed as 40 or less but more than 35—by adding to \$67950 an amount calculated by multiplying the number by which the injury scale value exceeds 35 by \$2920;
- (i) if the injury scale value of the injury is assessed as 50 or less but more than 40—by adding to \$82550 an amount calculated by multiplying the number by which the injury scale value exceeds 40 by \$3130;
- (j) if the injury scale value of the injury is assessed as 60 or less but more than 50—by adding to \$113850 an amount calculated by multiplying the number by which the injury scale value exceeds 50 by \$3350;
- (k) if the injury scale value of the injury is assessed as 70 or less but more than 60—by adding to \$147350 an amount calculated by multiplying the number by which the injury scale value exceeds 60 by \$3560;
- (1) if the injury scale value of the injury is assessed as 80 or less but more than 70—by adding to \$182950 an amount calculated by multiplying the number by which the injury scale value exceeds 70 by \$3790;
- (m) if the injury scale value of the injury is assessed as 90 or less but more than 80—by adding to \$220850 an amount

- calculated by multiplying the number by which the injury scale value exceeds 80 by \$4010;
- (n) if the injury scale value of the injury is assessed as 100 or less but more than 90—by adding to \$260950 an amount calculated by multiplying the number by which the injury scale value exceeds 90 by \$4240.

4 General damages calculation provisions—1 July 2012 to 30 June 2013

The general damages must be calculated for an injury arising on or after 1 July 2012 to and including 30 June 2013 as follows—

- (a) if the injury scale value of the injury is assessed as 5 or less—by multiplying the injury scale value by \$1290;
- (b) if the injury scale value of the injury is assessed as 10 or less but more than 5—by adding to \$6450 an amount calculated by multiplying the number by which the injury scale value exceeds 5 by \$1530;
- (c) if the injury scale value of the injury is assessed as 15 or less but more than 10—by adding to \$14100 an amount calculated by multiplying the number by which the injury scale value exceeds 10 by \$1790;
- (d) if the injury scale value of the injury is assessed as 20 or less but more than 15—by adding to \$23050 an amount calculated by multiplying the number by which the injury scale value exceeds 15 by \$2050;
- (e) if the injury scale value of the injury is assessed as 25 or less but more than 20—by adding to \$33300 an amount calculated by multiplying the number by which the injury scale value exceeds 20 by \$2300;
- (f) if the injury scale value of the injury is assessed as 30 or less but more than 25—by adding to \$44800 an amount calculated by multiplying the number by which the injury scale value exceeds 25 by \$2560;
- (g) if the injury scale value of the injury is assessed as 35 or less but more than 30—by adding to \$57600 an amount

Page 184 2014 SL No. 129

- calculated by multiplying the number by which the injury scale value exceeds 30 by \$2820;
- (h) if the injury scale value of the injury is assessed as 40 or less but more than 35—by adding to \$71700 an amount calculated by multiplying the number by which the injury scale value exceeds 35 by \$3080;
- (i) if the injury scale value of the injury is assessed as 50 or less but more than 40—by adding to \$87100 an amount calculated by multiplying the number by which the injury scale value exceeds 40 by \$3300;
- (j) if the injury scale value of the injury is assessed as 60 or less but more than 50—by adding to \$120100 an amount calculated by multiplying the number by which the injury scale value exceeds 50 by \$3530;
- (k) if the injury scale value of the injury is assessed as 70 or less but more than 60—by adding to \$155400 an amount calculated by multiplying the number by which the injury scale value exceeds 60 by \$3760;
- (1) if the injury scale value of the injury is assessed as 80 or less but more than 70—by adding to \$193000 an amount calculated by multiplying the number by which the injury scale value exceeds 70 by \$4000;
- (m) if the injury scale value of the injury is assessed as 90 or less but more than 80—by adding to \$233000 an amount calculated by multiplying the number by which the injury scale value exceeds 80 by \$4230;
- (n) if the injury scale value of the injury is assessed as 100 or less but more than 90—by adding to \$275300 an amount calculated by multiplying the number by which the injury scale value exceeds 90 by \$4470.

5 General damages calculation provisions—1 July 2013 to 30 June 2014

The general damages must be calculated for an injury arising on or after 1 July 2013 to and including 30 June 2014 as follows—

- (a) if the injury scale value of the injury is assessed as 5 or less—by multiplying the injury scale value by \$1360;
- (b) if the injury scale value of the injury is assessed as 10 or less but more than 5—by adding to \$6800 an amount calculated by multiplying the number by which the injury scale value exceeds 5 by \$1610;
- (c) if the injury scale value of the injury is assessed as 15 or less but more than 10—by adding to \$14850 an amount calculated by multiplying the number by which the injury scale value exceeds 10 by \$1890;
- (d) if the injury scale value of the injury is assessed as 20 or less but more than 15—by adding to \$24300 an amount calculated by multiplying the number by which the injury scale value exceeds 15 by \$2160;
- (e) if the injury scale value of the injury is assessed as 25 or less but more than 20—by adding to \$35100 an amount calculated by multiplying the number by which the injury scale value exceeds 20 by \$2420;
- (f) if the injury scale value of the injury is assessed as 30 or less but more than 25—by adding to \$47200 an amount calculated by multiplying the number by which the injury scale value exceeds 25 by \$2700;
- (g) if the injury scale value of the injury is assessed as 35 or less but more than 30—by adding to \$60700 an amount calculated by multiplying the number by which the injury scale value exceeds 30 by \$2970;
- (h) if the injury scale value of the injury is assessed as 40 or less but more than 35—by adding to \$75550 an amount calculated by multiplying the number by which the injury scale value exceeds 35 by \$3250;
- (i) if the injury scale value of the injury is assessed as 50 or less but more than 40—by adding to \$91800 an amount calculated by multiplying the number by which the injury scale value exceeds 40 by \$3480;
- (j) if the injury scale value of the injury is assessed as 60 or less but more than 50—by adding to \$126600 an amount

Page 186 2014 SL No. 129

- calculated by multiplying the number by which the injury scale value exceeds 50 by \$3720;
- (k) if the injury scale value of the injury is assessed as 70 or less but more than 60—by adding to \$163800 an amount calculated by multiplying the number by which the injury scale value exceeds 60 by \$3960;
- (1) if the injury scale value of the injury is assessed as 80 or less but more than 70—by adding to \$203400 an amount calculated by multiplying the number by which the injury scale value exceeds 70 by \$4220;
- (m) if the injury scale value of the injury is assessed as 90 or less but more than 80—by adding to \$245600 an amount calculated by multiplying the number by which the injury scale value exceeds 80 by \$4460;
- (n) if the injury scale value of the injury is assessed as 100 or less but more than 90—by adding to \$290200 an amount calculated by multiplying the number by which the injury scale value exceeds 90 by \$4710.

6 General damages calculation provisions—1 July 2014

The general damages must be calculated for an injury arising on or after 1 July 2014 as follows—

- (a) if the injury scale value of the injury is assessed as 5 or less—by multiplying the injury scale value by \$1410;
- (b) if the injury scale value of the injury is assessed as 10 or less but more than 5—by adding to \$7050 an amount calculated by multiplying the number by which the injury scale value exceeds 5 by \$1670;
- (c) if the injury scale value of the injury is assessed as 15 or less but more than 10—by adding to \$15400 an amount calculated by multiplying the number by which the injury scale value exceeds 10 by \$1960;
- (d) if the injury scale value of the injury is assessed as 20 or less but more than 15—by adding to \$25200 an amount calculated by multiplying the number by which the injury scale value exceeds 15 by \$2240;

- (e) if the injury scale value of the injury is assessed as 25 or less but more than 20—by adding to \$36400 an amount calculated by multiplying the number by which the injury scale value exceeds 20 by \$2510;
- (f) if the injury scale value of the injury is assessed as 30 or less but more than 25—by adding to \$48950 an amount calculated by multiplying the number by which the injury scale value exceeds 25 by \$2800;
- (g) if the injury scale value of the injury is assessed as 35 or less but more than 30—by adding to \$62950 an amount calculated by multiplying the number by which the injury scale value exceeds 30 by \$3080;
- (h) if the injury scale value of the injury is assessed as 40 or less but more than 35—by adding to \$78350 an amount calculated by multiplying the number by which the injury scale value exceeds 35 by \$3370;
- (i) if the injury scale value of the injury is assessed as 50 or less but more than 40—by adding to \$95200 an amount calculated by multiplying the number by which the injury scale value exceeds 40 by \$3610;
- (j) if the injury scale value of the injury is assessed as 60 or less but more than 50—by adding to \$131300 an amount calculated by multiplying the number by which the injury scale value exceeds 50 by \$3860;
- (k) if the injury scale value of the injury is assessed as 70 or less but more than 60—by adding to \$169900 an amount calculated by multiplying the number by which the injury scale value exceeds 60 by \$4110;
- (1) if the injury scale value of the injury is assessed as 80 or less but more than 70—by adding to \$211000 an amount calculated by multiplying the number by which the injury scale value exceeds 70 by \$4380;
- (m) if the injury scale value of the injury is assessed as 90 or less but more than 80—by adding to \$254800 an amount calculated by multiplying the number by which the injury scale value exceeds 80 by \$4630;

Page 188 2014 SL No. 129

(n) if the injury scale value of the injury is assessed as 100 or less but more than 90—by adding to \$301100 an amount calculated by multiplying the number by which the injury scale value exceeds 90 by \$4890.

Schedule 8 Dictionary

section 3

adverse psychological reaction does not include a mental disorder.

AMA 5 means the 5th edition of the Guides to the Evaluation of Permanent Impairment published by the American Medical Association.

ankylosis means fixation of a joint in a specific position.

digestive system—

- (a) means the organs and other parts of the body forming the alimentary tract, and includes the tongue, throat and abdominal wall; but
- (b) does not include an organ or other part of the body mentioned in the injury column of schedule 4.

dominant injury, of multiple injuries, means—

- (a) if the highest range for 2 or more of the injuries of the multiple injuries is the same—the injury of those injuries selected as the dominant injury by a court assessing an ISV; or
- (b) otherwise—the injury of the multiple injuries having the highest range.

Note-

The selection of a particular injury as a dominant injury from 2 or more injuries having the same highest range will not affect the outcome of the court's assessment of an ISV for the multiple injuries.

DSM 4 means the 4th edition of the Diagnostic and Statistical Manual of Mental Disorders, Text Revision (DSM-IV-TR) published by the American Psychiatric Association in 2000.

highest range means the range of ISVs having the highest maximum ISV.

ISV means injury scale value.

Page 190 2014 SL No. 129

Le Fort I fracture means a horizontal segmented fracture of the alveolar process of the maxilla.

Le Fort II fracture means a unilateral or bilateral fracture of the maxilla—

- (a) in which the body of the maxilla is separated from the facial skeleton and pyramidal in shape; and
- (b) that may extend through the body of the maxilla down the midline of the hard palate, through the floor of the orbit and into the nasal cavity.

Le Fort III fracture means a fracture in which the entire maxilla and 1 or more facial bones are completely separated from the brain case.

medical expert, for an assessment of a PIRS rating, means a person who—

- (a) is appropriately qualified to perform the assessment, including a psychologist, neuropsychologist or psychiatrist; and
- (b) has had appropriate training in the use of the PIRS.

mental disorder means a mental disorder recognised under DSM 4.

permanent impairment, in relation to an injury, means the impairment an injured person has, or is likely to have, even after maximum medical improvement.

PIRS means the psychiatric impairment rating scale set out in schedule 6.

PIRS rating, for a mental disorder, means a rating on the PIRS for the permanent impairment caused by the mental disorder.

pre-existing, in relation to an injury, means existing at the time immediately before the injury.

range, in relation to an ISV for an injury, means the range of ISVs for the injury set out in schedule 4.

whole person impairment, in relation to an injury, means an estimate, expressed as a percentage, of the impact of a

permanent impairment caused by the injury on the injured person's overall ability to perform activities of daily living other than employment.

ENDNOTES

- 1 Made by the Governor in Council on 26 June 2014.
- 2 Notified on the Queensland legislation website on 27 June 2014.
- 3 The administering agency is the Department of Justice and Attorney-General.
